BUREAU OF LABOR STATISTICS
Janet L. Norwood, *Commissioner*

OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $20 domestic, and $25 foreign. Single copy $3.50. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $95 in contiguous U.S. and Hawaii; $110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.4 percent before seasonal adjustment in January to 282.5 (1967=100). The All Items experimental measure using a rental equivalence approach (CPI-U, X-1) increased 0.5 percent to 257.2. The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.4 percent before seasonal adjustment in January to 282.1 (1967=100). Compared with their levels in January 1981, the CPI-U was 8.4 percent higher, and both the CPI-U, X-1 and the CPI-W were 8.2 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.3 percent in January. The CPI-U, X-1 advanced 0.4 percent. The 0.3 percent increase in the official CPI-U continued the slowdown evident since October. The food and beverage component rose 0.7 percent in January, following smaller increases in the preceding 3 months. The rate of advance in housing costs continued to be moderate, and the indexes for transportation and apparel and upkeep declined. The entertainment index accelerated while the indexes for the medical care and other goods and services components rose about the same as in the preceding month.

The food and beverage index advanced 0.7 percent in January, following increases of 0.1 percent in each of the preceding 2 months. Prices for grocery store foods increased 1.0 percent, after declining in the fourth quarter. Primarily responsible for the acceleration were large increases in prices for fresh vegetables (16.8 percent) and fruits. Increases in prices for sugar, nonalcoholic beverages, and cereal and bakery products also contributed to the advance. The index for meats, poultry, fish, and eggs continued to decline, but not by as much as in December. Declines in beef and egg prices more than offset increases in prices for pork, poultry, and fish and seafood. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.3 and 0.6 percent, respectively.

The housing component rose 0.3 percent in January, continuing the moderation which began in October. A further deceleration in shelter costs more than offset a 1.1 percent increase in the index for fuel and other utilities. Homeownership costs, which have been primarily responsible for the recent slowdown in the overall CPI, declined slightly in January. Home financing costs decreased, as a 0.4 percent decline in house prices offset a 0.2 percent increase in mortgage interest rates. Property taxes, however, rose sharply for the second consecutive month. The index for residential rent increased 0.6 percent, less than in recent months. Substantial increases in charges for both natural gas and electricity were largely responsible for the increase in the fuels and other utilities index. Fuel oil prices increased 0.5 percent.

The transportation component declined 0.2 percent in January, following a 0.6 percent increase in December. A substantial decline in gasoline prices was pri-

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted

Transportation	1.0	.6	1.1	1.3	.9	.6	-.2	5.2	9.5
Medical care	1.3	1.2	.9	1.0	1.1	.7	.8	10.8	12.1
Entertainment	.3	.6	.8	.8	.8	.3	.7	6.9	6.9
Other goods and services	.7	.4	1.5	1.0	.5	.6	.6	6.7	9.8

marily responsible for the decrease. New car prices declined, reflecting rebates offered by domestic manufacturers. Increases in the indexes for used cars and automobile finance charges were noticeably smaller in January. The 0.3 percent increase in used car prices was the smallest in 19 months. Automobile finance charges rose 0.2 percent, following substantial increases in each of the preceding 3 months. The index for public transportation rose 0.3 percent, about the same as in December.

The 0.8 percent rise in the medical care index in January compares with an average monthly increase of 1.0 percent during 1981. Charges for hospital and other medical care services rose 1.8 percent in January. Charges for physicians' services and dental services increased 0.8 and 0.7 percent, respectively. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 0.5 percent, the smallest advance since May 1979.

The index for apparel and upkeep declined 0.1 percent in January. Price declines in women's and girls' clothing, footwear, and other apparel commodities offset increases in men's and boys' clothing and infants' and toddlers' apparel. The index for apparel services rose only 0.1 percent.

The indexes for entertainment and other goods and services rose 0.7 and 0.6 percent, respectively, in January.

CPI-U Experimental Measures

On a seasonally adjusted basis, the CPI-U using rent substitution (X-1) rose 0.4 percent in January. The homeownership component for the CPI-U, X-1 increased 0.6 percent, about the same as in recent months. In contrast, the homeownership component of the official CPI-U, which employs house prices and mortgage interest rates, declined 0.1 percent. (See table C for monthly data on all alternative measures of homeownership.)

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.3 percent in January. The food and beverage component increased 0.8 percent in January. Grocery store food prices increased 1.0 percent, following declines in both November and December. The acceleration was due primarily to a sharp increase in fresh vegetable prices. The housing component advanced 0.2 percent. Homeownership costs declined 0.1 percent, as house prices declined 0.5 percent and home financing costs decreased 0.3 percent. The index for fuel and other utilities increased 1.2 percent, largely due to a substantial increase in charges for gas and electricity. The transportation component declined 0.2 percent, primarily due to a sharp decrease in gasoline prices. New car prices also declined in January, and increases in used car prices and charges for automobile financing were smaller than in recent months. The medical care index rose 0.8 percent. The index for apparel and upkeep was unchanged, and indexes for entertainment and other goods and services increased 0.4 and 0.6 percent, respectively, in January.

Homeownership Changes

On October 27, 1981, the Bureau of Labor Statistics announced its intention to change the way in which homeownership costs are measured for the Consumer Price Index. Effective with data for January 1983, the Consumer Price Index for All Urban Consumers (CPI-U) will incorporate a rental equivalence measure for homeownership costs. Effective with data for January 1985, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will also incorporate the rental equivalence approach. Details of these changes can be found in U.S. Department of Labor news release 81-506, October 27, 1981.

[1] Residential rent, not seasonally adjusted.

NOTE: See Technical Notes for explanation of homeownership measures.

Postponement of Rebasing of CPI

Because of severe budget constraints, the Bureau of Labor Statistics did not carry out the Government directive to rebase the Consumer Price Index and the Producer Price Index to the new U.S. Government 1977=100 reference base. Postponement was required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change. No alternative date for adopting the 1977 reference base has been set. All Items indexes on a 1977=100 reference base are available upon request from the Bureau.

Outlet Sample Changes

Beginning with data for January 1982, prices collected from the sample of stores and service establishments selected for the Consumer Price Index for All Urban Consumers (CPI-U), also will be used for the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W). This modification will result in a significant reduction in data collection and processing costs. The weighting structure of the CPI-W will not be changed; it will continue to represent the spending patterns of the urban wage earner and clerical worker population.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

South/D	.9	.9	-1.4	-.6	6.8	1.4
West/D	1.5	.8	-.5	-.2	6.8	1.8

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

[5] Indexes on a January 1981=100 base.

[6] Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[7] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978=100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska	January 1978=100.
Baltimore, Md	March 1978=100.
Boston, Mass	January 1978=100.
Cincinnati, Ohio-Ky.-Ind	March 1978=100.
Denver-Boulder, Colo	January 1978=100.
Miami, Fla	November 1977=100.
Milwaukee, Wis	November 1977=100.
Northeastern Pennsylvania	November 1977=100.
Portland, Oreg.-Wash	January 1978=100.
St. Louis, Mo.-Ill	March 1978=100.
San Diego, Calif	November 1977=100.
Seattle-Everett, Wash	November 1977=100.
Washington, D.C.-Md.-Va	November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Table 20. Consumer Price Index for Urban Wage Earners and Clerical Workers: Areas priced monthly, by expenditure category and commodity and service group, percent change from December 1981 to January 1982

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

[5] Indexes on a January 1981=100 base, except U.S. city average.

[6] Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[7] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978=100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska ....January 1978=100.
Baltimore, Md.......................March 1978=100.
Boston, Mass.........................January 1978=100.
Cincinnati, Ohio-Ky.-Ind........March 1978=100.
Denver-Boulder, Colo...........January 1978=100.
Miami, Fla............................November 1977=100.
Milwaukee, Wis.....................November 1977=100.
Northeastern Pennsylvania...November 1977=100.
Portland, Oreg.-Wash...........January 1978=100.
St. Louis, Mo.-Ill....................March 1978=100.
San Diego, Calif.....................November 1977=100.
Seattle-Everett, Wash...........November 1977=100.
Washington, D.C.-Md.-Va.....November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 6.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

Table 24A. Consumer Price Index for All Urban Consumers: Population size class[1], by expenditure category and commodity and service group, Annual averages, 1981, and percent changes, 1980 to 1981, December 1977=100 unless otherwise noted

---

[1] The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 335,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

Table 25A. Consumer Price Index for All Urban Consumers: Cross classification of region and population size class[1], by expenditure category and commodity and service group, Annual averages, 1981, and percent changes, 1980 to 1981, December 1977=100 unless otherwise noted

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

Table 26A. Consumer Price Index for Urban Wage Earners and Clerical Workers: Region[1], by expenditure category and commodity and service group, Annual averages, 1981, and percent changes, 1980 to 1981, December 1977=100 unless otherwise noted—Continued

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

Table 27A. Consumer Price Index for Urban Wage Earners and Clerical Workers: Population size class[1], by expenditure category and commodity and service group, Annual averages, 1981, and percent changes, 1980 to 1981, December 1977=100 unless otherwise noted

---

[1] The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

Table 28A. Consumer Price Index for Urban Wage Earners and Clerical Workers: Cross classification of region and population size class[1], by expenditure category and commodity and service group, Annual averages, 1981, and percent changes, 1980 to 1981, December 1977 = 100 unless otherwise noted

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components. (1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

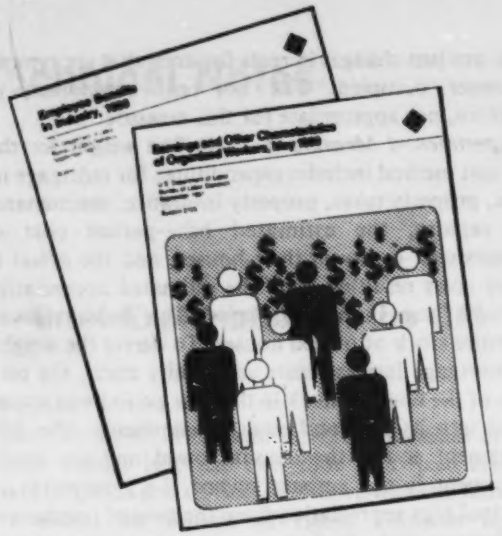
Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: (1) The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

U.S. GOVERNMENT PRINTING OFFICE: 1982 361-260/304

Two New Reports from the Bureau of Labor Statistics



☐	**Employee Benefits in Industry, 1980** Bulletin 2107	Summarizes results of a BLS survey of the incidence and characteristics of private sector employee benefit plans. The survey was conducted for for the Office of Personnel	Management for use in developing the dollar cost of providing Federal employees with a level of benefits comparable to that in private industry. 36 pages.	GPO Stock No. 029-001-02617-0	price $3.25
☐	**Earnings and Other Characteristics of Organized Workers, May 1980** Bulletin 2105	Presents data on the occupation, industry, region, weekly earnings, sex, race, and age of employed wage and salary workers who are members of	labor organizations and those who are not members but are represented by labor organizations. 70 pages.	GPO Stock No. 029-001-02620-0	price $4.75

Where to send order

You may send your order directly to:

Superintendent of Documents
U.S. Government Printing Office
Washington, D.C. 20402

Subscriptions *must* be sent directly to Superintendent of Documents.

The following BLS regional offices will expedite all other orders.

1603 JFK Building
Boston, Mass. 02203

Suite 3400
1515 Broadway
New York, N.Y. 10036

P.O. Box 13309
Philadelphia, Pa. 19101

OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $20 domestic, and $25 foreign. Single copy $3.50. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $95 in contiguous U.S. and Hawaii; $110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.3 percent before seasonal adjustment in February to 283.4. The All Items experimental measure using a rental equivalence approach (CPI-U, X-1) increased 0.3 percent to 258.0. The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.3 percent before seasonal adjustment in February to 282.9. Compared with their levels in February 1981, the CPI-U was 7.7 percent higher, the CPI-U, X-1 7.1 percent higher, and the CPI-W 7.4 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.2 percent in February, while the CPI-U, X-1 increased 0.1 percent. The 0.2 percent rise in the official CPI-U follows a 0.3 percent increase in January and is in line with the moderate rates of increase evident since October. In the October to February period, the index rose at a seasonally adjusted annual rate of 4.5 percent. The transportation component declined for the second consecutive month in February, largely due to a sharp drop in gasoline prices. The housing index continued to increase moderately. The food and beverage index advanced 0.6 percent in February, following an increase of 0.7 percent in January. The indexes for medical care and entertainment rose about the same as in the preceding month. The index for apparel and upkeep rose 0.4 percent in February, following a small decline during the preceding 3-month period. The index for other goods and services also accelerated in February.

Grocery store food prices increased 0.8 percent in February, following a 1.0 percent increase in January. The index for fruits and vegetables advanced sharply, but by less than in January. The index for meats, poultry, fish, and eggs also registered a substantial increase, as sharp increases in prices for pork and eggs offset price declines in beef and poultry. All other major grocery store food groups recorded either moderate increases or declines in February. Prices of the other two components of the food and beverage component— restaurant meals and alcoholic beverages—rose 0.2 and 0.6 percent, respectively.

The housing component advanced 0.4 percent in February, about the same as in recent months. The indexes for rent and homeownership both rose 0.4 percent. Home financing costs increased slightly, as a 0.4 percent increase in house prices offset a 0.2 percent decline in mortgage interest rates. Property taxes, however, rose sharply for the third consecutive month. The index for fuel and other utilities rose 0.2 percent in February, following a sharp increase in January. Fuel oil prices and charges for electricity both declined, and the increase in charges for natural gas was substantially smaller than in January. The index for household furnishings and operations rose 0.6 percent in February,

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended February 1982	12 months ended February 1982
	1981					1982			
	August	September	October	November	December	January	February		
All items	0.8	1.1	0.4	0.5	0.4	0.3	0.2	3.7	7.7
Food and beverages	.5	.7	.2	.1	.1	.7	.6	5.9	4.6
Housing	1.0	1.3	.0	.5	.4	.3	.4	4.1	9.4
Apparel and upkeep	.7	.3	.3	-.1	.1	-.1	.4	1.7	3.3
Transportation	.6	1.1	1.3	.9	.6	-.2	-.7	-1.2	6.3
Medical care	1.2	.9	1.0	1.1	.7	.8	.7	9.0	11.9
Entertainment	.6	.8	.8	.8	.3	.7	.7	6.5	6.7
Other goods and services	.4	1.5	1.0	.5	.6	.6	.9	8.6	10.1

compared with 0.4 percent in both December and January.

The transportation component declined 0.7 percent in February, following a decline of 0.2 percent in January. Declines in prices for gasoline and new cars were responsible for the decrease. Over the past 12 months, gasoline prices have declined 2.8 percent. The February decline of 0.8 percent in new car prices reflects rebates offered by domestic car manufacturers. Automobile finance charges declined 1.0 percent, following an increase of 0.2 percent in January and substantial increases in earlier months. On the other hand, used car prices increased 0.5 percent, following seasonal adjustment. The index for public transportation advanced 0.6 percent, largely due to a 1.0 percent increase in charges for airline fares.

The 0.7 percent rise in the medical care index in February was about the same as in January and compares with an average monthly increase of 1.0 percent during 1981. Charges for hospital and other medical care services rose 0.9 percent in February. Charges for physicians' services and dental services increased 1.0 and 0.4 percent, respectively. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 0.6 percent.

The index for apparel and upkeep advanced 0.4 percent in February, following a 0.1 percent decline in January. Clothing prices increased in February, reflecting both a return to regular prices from sales and the introduction of spring wear. Charges for apparel services rose 0.3 percent.

The index for entertainment increased 0.7 percent in February, the same as in January. The other goods and services component advanced 0.9 percent in February, largely due to a sharp increase in tobacco prices.

CPI-U Experimental Measures

On a seasonally adjusted basis, the CPI-U using rent substitution (X-1) rose 0.1 percent in February. The homeownership component for the CPI-U, X-1 increased 0.4 percent, somewhat less than in recent months. The homeownership component of the official CPI-U, which employs house prices and mortgage interest rates, also increased 0.4 percent.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.2 percent in February. The food and beverage component increased 0.4 percent in February. Grocery store food prices increased 0.6 percent in February, following a 1.0 percent increase in January. A substantially smaller increase in prices for fruits and vegetables was largely responsible for the moderation. On the other hand, the index for meats, poultry, fish, and eggs advanced sharply. The housing component increased 0.3 percent. Homeownership costs and charges for rent both rose 0.3 percent. The index for fuels and utilities advanced slightly, following an increase of 1.2 percent in January. The indexes for fuel oil and electricity registered declines in February, while the increase in charges for natural gas was less than in January. The transportation component declined 0.7 percent, following a 0.2 percent decline in January, primarily due to a sharp decline—2.4 percent—in gasoline prices. New car prices and charges for automobile financing also declined in February. The medical care and entertainment components both increased 0.7 percent. The apparel and upkeep index rose 0.4 percent. The other goods and services index advanced 1.0 percent in February, due in part to a sharp increase in tobacco prices.

[1] Residential rent, not seasonally adjusted.

NOTE: See Technical Notes for explanation of homeownership measures.

Homeownership Changes

On October 27, 1981, the Bureau of Labor Statistics announced its intention to change the way in which homeownership costs are measured for the Consumer Price Index. Effective with data for January 1983, the Consumer Price Index for All Urban Consumers (CPI-U) will incorporate a rental equivalence measure for homeownership costs. Effective with data for January 1985, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will also incorporate the rental equivalence approach. Details of these changes can be found in U.S. Department of Labor news release 81-506, October 27, 1981.

Postponement of Rebasing of Consumer Price Index

Because of severe budget constraints, the Bureau of Labor Statistics did not carry out the Government directive to rebase the Consumer Price Index and the Producer Price Index to the new U.S. Government 1977=100 reference base. Postponement was required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change. No alternative date for adopting the 1977 reference base has been set. All Items indexes on a 1977=100 reference base are available upon request from the Bureau.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

West/D	2	12/77	-	149.1	-	153.3	8.7	2.8	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963=100.
Dallas-Fort Worth, Tex.	November 1963=100.
Honolulu, Hawaii	December 1963=100.

[3] Indexes on a January 1961=100 base.

[4] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[5] Indexes are on the bases listed:

Atlanta, Ga.	December 1977=100.
Buffalo, N. Y.	February 1978=100.
Cleveland, Ohio	February 1978=100.
Dallas-Fort Worth, Tex.	February 1978=100.
Honolulu, Hawaii	December 1977=100.
Houston, Tex.	April 1978=100.
Kansas City, Mo.-Kans.	December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978=100.
Pittsburgh, Pa.	April 1978=100.
San Francisco-Oakland, Calif.	December 1977=100.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

West/D	2	12/77	-	149.2	-	153.2	8.8	2.7	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

West/D	.8	1.0	1.3	.1	.6	.7

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963=100.
Dallas-Fort Worth, Tex.	November 1963=100.
Honolulu, Hawaii	December 1963=100.

[3] Indexes on a January 1981=100 base.

[4] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[5] Indexes are on the bases listed:

Atlanta, Ga.	December 1977=100.
Buffalo, N. Y.	February 1978=100.
Cleveland, Ohio	February 1978=100.
Dallas-Fort Worth, Tex.	February 1978=100.
Honolulu, Hawaii	December 1977=100.
Houston, Tex.	April 1978=100.
Kansas City, Mo.-Kans.	December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978=100.
Pittsburgh, Pa.	April 1978=100.
San Francisco-Oakland, Calif.	December 1977=100.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981 = 100 base.

[3] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[4] New series: indexes on a June 1978 = 100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

[NA] Data not adequate for publication.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined.

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

[NA] Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined.

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

NA Data not adequate for publication.

NA Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components. (1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: (1) The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

* U. S. GOVERNMENT PRINTING OFFICE 1982 361-260/305

BLS Periodicals

Monthly Labor Review
the oldest and most authoritative Government research journal in economics and social sciences. Regular features include current labor statistics and developments in industrial relations.

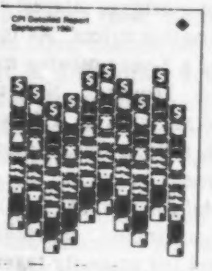
$23, a year, 12 issues.

Occupational Outlook Quarterly
helps students and guidance counselors learn about new occupations, training opportunities, salary trends, and career couseling programs. Written in nontechnical language and illustrated in color.

$8, four issues.

Employment and Earnings
gives current employment and earnings statistics for the Nation as a whole, for individual States, and for more than 200 areas. Included are household and establishment data, seasonally and not seasonally adjusted.

$31 a year, 12 issues and annual supplement.



CPI Detailed Report
is the most comprehensive report on monthly consumer price indexes and rates of change. Includes data on commodity and service groups for 28 cities.

$20 a year, 12 issues.

Producer Prices and Price Indexes
includes price movements of both farm and industrial commodities, by industry and stage of processing. Tables and charts give greater detail than available in other published material.

$20 a year, 12 issues and annual supplement.

Current Wage Developments
reports on specific wage and benefit changes from collective bargaining agreements. Includes data on strikes or lockouts, major agreements expiring, and compensation changes.

$14 a year, 12 issues.

BLS periodicals provide timely information on employment, occupations, wages, and prices.

Subscriptions are available from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.
For subscriptions to foreign countries, add 25 percent to all prices.
Make all checks payable to Superintendent of Documents.

OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $20 domestic, and $25 foreign. Single copy $3.50. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $95 in contiguous U.S. and Hawaii; $110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) declined 0.1 percent before seasonal adjustment in March to 283.1 (1967=100). The All Items experimental measure using a rental equivalence approach (CPI-U, X-1) increased 0.2 percent to 258.4. The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) declined 0.1 percent before seasonal adjustment in March to 282.5. Compared with their levels in March 1981, the CPI-U was 6.8 percent higher, the CPI-U, X-1 6.4 percent higher, and the CPI-W 6.5 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers declined 0.3 percent in March, following moderate increases in each of the preceding 5 months. The CPI-U, X-1 increased 0.2 percent. The 0.3 percent decline in the official CPI-U represents the first decrease since August 1965 and the largest drop registered since a 0.4 percent decline in November 1953. The transportation, housing, and food and beverage components all declined in March. The indexes for apparel and upkeep and entertainment continued to rise moderately, while large increases were recorded for the medical care and other goods and services components.

During the 3 months ended in March, the CPI-U rose at a seasonally adjusted annual rate of 1.0 percent, the smallest quarterly increase since 1965. This compares with an advance of 5.4 percent in the fourth quarter of 1981 and substantially larger quarterly increases during the preceding 4 years. The continued deceleration in the first quarter figures was largely due to a sharp decline in the index for transportation and further moderation in the housing component.

The transportation component recorded its third consecutive monthly decrease in March, declining 1.0 percent. Gasoline prices dropped 4.0 percent. Over the past 12 months, the gasoline index has declined 8.7 percent. Partially offsetting the March decline in gasoline prices were moderate increases in most other transportation components. The index for used cars rose 0.5 percent, the same as in February. The new car index increased 0.1 percent, following seasonal adjustment, after recording declines in both January and February. The indexes for public transportation and automobile finance charges were both unchanged in March.

The housing component declined 0.3 percent in March. A 0.9 percent decline in homeownership costs was partially offset by moderate increases in the indexes for other shelter costs, fuels and utilities, and household furnishings and operation. Home financing costs declined 1.6 percent, reflecting a 1.3 percent decrease in mortgage interest rates and a 0.4 percent drop in house prices. The rent index rose 0.5 percent. The index for fuel and other utilities also increased 0.5 percent as increases in charges for gas and electricity more than offset a 3.0 percent decline in fuel oil prices. Over the past 12 months, fuel oil prices have declined 5.3 percent.

The index for food and beverages declined 0.3 percent in March. Grocery store food prices declined 0.6 percent, following increases of 1.0 and 0.8 percent in January and February, respectively. Fresh vegetable

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended March 1982	12 months ended March 1982
	1981				1982				
	September	October	November	December	January	February	March		
All items	1.1	0.4	0.5	0.4	0.3	0.2	-0.3	1.0	6.8
Food and beverages	.7	.2	.1	.1	.7	.6	-.3	4.2	4.0
Housing	1.3	0	.5	.4	.3	.4	-.3	1.3	8.5
Apparel and upkeep	.3	.3	-.1	.1	-.1	.4	.4	3.2	3.2
Transportation	1.1	1.3	.9	.6	-.2	-.7	-1.0	-7.2	4.2
Medical care	.9	1.0	1.1	.7	.8	.7	1.0	10.2	12.0
Entertainment	.8	.8	.8	.3	.7	.7	.5	7.4	6.7
Other goods and services	1.5	1.0	.5	.6	.6	.9	1.0	10.1	10.3

prices declined sharply—down 12.5 percent. Beef, poultry, and egg prices all registered moderate declines, while prices for pork increased slightly. All other major grocery store food groups recorded either moderate increases or small declines in March. Prices for the other two components of the food and beverage index—restaurant meals and alcoholic beverages—both increased 0.2 percent.

The medical care index rose 1.0 percent in March, somewhat more than earlier this year. Over the past 12 months, the medical care index rose 12.0 percent. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 1.2 percent in March. Charges for hospital rooms and physicians' services rose 1.3 and 0.5 percent, respectively.

The index for apparel and upkeep advanced 0.4 percent in March, the same as in February. The index for women's and girls' clothing rose 1.2 percent, reflecting both a return to regular prices from sales and the introduction of spring wear. Prices for other clothing items registered either small increases or declines in March.

The entertainment index increased 0.5 percent in March. The other goods and services component rose 1.0 percent in March, following a 0.9 percent increase in February. For the second consecutive month, a sharp increase in tobacco prices was largely responsible for the advance.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U using rent substitution (X-1) rose 0.2 percent in March. The official CPI-U declined 0.3 percent. The large differences in movement in March reflect the differences in the treatment of homeownership costs in the two indexes. The CPI-U, X-1 uses rental charges to represent movements in shelter costs of homeowners. Rental charges increased 0.5 percent in March. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This measure of homeownership costs declined 0.9 percent in March as a result of a decrease in mortgage interest rates and house prices.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers declined 0.2 percent in March, following moderate increases in each of the preceding 5 months. The food and beverage component decreased 0.2 percent. Grocery store food prices declined 0.5 percent, following increases of 1.0 and 0.6 percent in January and February, respectively. The housing component also declined in March. An 0.8 percent decrease in homeownership costs more than offset moderate increases in the indexes for other shelter costs, fuels and other utilities, and household furnishings and operations. The transportation component declined for the third consecutive month—down 1.0 percent in March—primarily due to a 3.9 percent decline in gasoline prices. The index for medical care rose 0.8 percent, reflecting large increases in charges for hospital rooms and prices for prescription and nonprescription drugs and medical supplies. The index for apparel and upkeep increased 0.7 percent. The other goods and services component advanced 1.0 percent in March, the same as in February. The entertainment index rose 0.3 percent.

Homeownership Changes

On October 27, 1981, the Bureau of Labor Statistics announced its intention to change the way in which homeownership costs are measured for the Consumer Price Index. Effective with data for January 1983, the Consumer Price Index for All Urban Consumers (CPI-U) will incorporate a rental equivalence measure for homeownership costs. Effective with data for January 1985, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will also incorporate the rental equivalence approach. Details of these changes can be found in U.S. Department of Labor news release 81-506, October 27, 1981.

[1] Residential rent, not seasonally adjusted.

NOTE: See Technical Notes for explanation of homeownership measures.

Postponement of Rebasing of CPI

Because of severe budget constraints, the Bureau of Labor Statistics did not carry out the Government directive to rebase the Consumer Price Index and the Producer Price Index to the new U.S. Government 1977=100 reference base. Postponement was required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change. No alternative date for adopting the 1977 reference base has been set. All Items indexes on a 1977=100 reference base are available upon request from the Bureau.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report,* available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

Foods, fuels, and several other items priced every month in all areas; st other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), clusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of o SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-rthwestern Ind. are the more extensive Standard Consolidated Areas. ea definitions are those established by the Office of Management and dget in 1973, except for Denver-Boulder, Colo. which does not include uglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Areas priced on pricing schedule 2 (See table 13) will appear next th.

Indexes on an October 1967=100 base unless otherwise indicated.

Indexes on a November 1977=100 base unless otherwise indicated.

The 1957-59=100 base is not available for Anchorage, Alaska and ver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October =100 base; index for Denver-Boulder, Colo. is on a January =100 base.

Indexes on a January 1961=100 base.

Index on a June 1978=100 base in Miami, Fla.; formerly on a ember 1977=100 base.

Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and ni, Fla.; formerly on the bases listed in footnote 6. Index on a January =100 base in Denver-Boulder, Col.

Indexes are on the bases listed :

Anchorage, Alaska	January 1978=100.
Baltimore, Md.	March 1978=100.
Boston, Mass.	January 1978=100.
Cincinnati, Ohio-Ky.-Ind.	March 1978=100.
Denver-Boulder, Colo.	January 1978=100.
Miami, Fla.	November 1977=100.
Milwaukee, Wis.	November 1977=100.
Northeastern Pennsylvania	November 1977=100.
Portland, Oreg.-Wash.	January 1978=100.
St. Louis, Mo.-Ill.	March 1978=100.
San Diego, Calif.	November 1977=100.
Seattle-Everett, Wash.	November 1977=100.
Washington, D.C.-Md.-Va.	November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

[1] Foods, fuels, and several other items priced every month in all areas; ost other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), clusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of o SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-orthwestern Ind. are the more extensive Standard Consolidated Areas. ea definitions are those established by the Office of Management and dget in 1973, except for Denver-Boulder, Colo. which does not include ouglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 18) will appear next month.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

[5] Indexes on a January 1961=100 base.

[6] Index on a June 1976=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[7] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978=100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska	January 1978=100.
Baltimore, Md.	March 1978=100.
Boston, Mass.	January 1978=100.
Cincinnati, Ohio-Ky.-Ind.	March 1978=100.
Denver-Boulder, Colo.	January 1978=100.
Miami, Fla.	November 1977=100.
Milwaukee, Wis.	November 1977=100.
Northeastern Pennsylvania	November 1977=100.
Portland, Oreg.-Wash.	January 1978=100.
St. Louis, Mo.-Ill.	March 1978=100.
San Diego, Calif.	November 1977=100.
Seattle-Everett, Wash.	November 1977=100.
Washington, D.C.-Md.-Va.	November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978; and *CPI Issues,* Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

Productivity and the Economy: A Chartbook

***Productivity*. Everybody talks about it.**
What does it mean?
How does it affect wages and costs?
What does it have to do with employment?

This new chartbook, produced by the staff of the Bureau of Labor Statistics, answers questions in understandable—yet technically accurate—charts and captions.

The chartbook explains what productivity is, how it has changed over the years, and what factors have contributed to that change.

The 100 page chartbook, priced at $5.50, is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or you may send your order to the BLS regional office nearest you.

OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $20 domestic, and $25 foreign. Single copy $3.50. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) both rose 0.4 percent before seasonal adjustment in April. The CPI-U rose to 284.3 and the CPI-W to 283.7 (1967 = 100), respectively. The All Items experimental measure using a rental equivalence approach (CPI-U, X-1) increased 0.2 percent to 258.8. Compared with their levels in April 1981, the CPI-U was 6.6 percent higher, the CPI-U, X-1 6.0 percent higher, and the CPI-W 6.3 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.2 percent in April, while the experimental CPI-U, X-1 declined 0.2 percent.

The 0.2 percent increase in the official CPI follows a decline of 0.3 percent in March and is in line with the moderate rates of increase evident from October through February. The housing and food and beverage components, which decreased in March, advanced in April and were largely responsible for the increase in the overall index. Partially offsetting these increases was a 1.6 percent decline in the transportation component. Increases in most other major components of consumer spending were about the same as in March. The indexes for apparel and upkeep and entertainment continued to register small increases, while large increases were recorded by the medical care and other goods and services components.

Rising homeownership costs accounted for over four-fifths of the 0.8 percent increase in the housing component. Home financing costs, which declined in March, rose 1.8 percent in April, reflecting increases of 1.2 percent in house prices and 0.6 percent in mortgage interest rates. The index for residential rent increased 0.2 percent, the smallest increase in 2 years. The fuel and other utilities component was unchanged in April. Increases in charges for natural gas, telephone services, and water and sewerage maintenance offset declines in fuel oil prices and charges for electricity. Over the past 12 months, fuel oil prices have declined 8.4 percent.

The index for food and beverages rose 0.3 percent in April, following a decline of 0.3 percent in March. Grocery store food prices also advanced 0.3 percent. The index for meats, poultry, fish, and eggs increased 1.1 percent in April. Beef and pork prices both increased sharply while poultry prices rose moderately, following seasonal adjustment. On the other hand, egg prices declined sharply for the second consecutive month. The index for fresh fruits and vegetables also declined, but not by as much as in March. All other major grocery store food groups recorded either moderate increases or small declines in April. Prices for the other two components of the food and beverage index—restaurant meals and alcoholic beverages—increased 0.4 and 0.3 percent, respectively.

The transportation component recorded its fourth consecutive monthly decrease in April, declining 1.6 percent. Gasoline prices dropped 6.7 percent. Over the past 12 months, the gasoline index has declined 12.5

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended April 1982	12 months ended April 1982
	1981			1982					
	October	November	December	January	February	March	April		
All items	0.4	0.5	0.4	0.3	0.2	-0.3	0.2	0.8	6.6
Food and beverages	.2	.1	.1	.7	.6	-.3	.3	2.4	4.1
Housing	0	.5	.4	.3	.4	-.3	.8	3.7	8.6
Apparel and upkeep	.3	-.1	.1	-.1	.4	.4	.1	3.9	3.0
Transportation	1.3	.9	.6	-.2	-.7	-1.0	-1.6	-12.1	2.8
Medical care	1.0	1.1	.7	.8	.7	1.0	1.0	11.2	12.1
Entertainment	.8	.8	.3	.7	.7	.5	.3	5.7	6.7
Other goods and services	1.0	.5	.6	.6	.9	1.0	.9	11.4	10.4

percent. Partially offsetting the April decline in gasoline prices were moderate increases in most other transportation components. The index for used cars rose 0.6 percent, while the new car index increased 0.7 percent. The indexes for public transportation rose 0.8 percent, largely due to increases in airline and intercity train fares.

The medical care index rose 1.0 percent in April, the same as in March. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 1.1 percent in April. Charges for hospital rooms and physicians' services rose 1.2 and 0.6 percent, respectively.

The index for apparel and upkeep rose 0.1 percent in April, following increases of 0.4 percent in each of the preceding 2 months. The index for women's and girls' clothing was unchanged in April, following an increase of 1.2 percent in the March index. Prices for men's and boys' clothing rose 0.5 percent.

The entertainment index rose 0.3 percent in April, following somewhat larger increases earlier this year. The other goods and services component advanced 0.9 percent, about the same as in the preceding 2 months. Increases in bank service charges and prices for personal care items were largely responsible for the April increase.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U using rent substitution (X-1) declined 0.2 percent in April. The official CPI-U rose 0.2 percent. The large difference in movement in April reflects the difference in the treatment of homeownership costs in the two indexes. The CPI-U, X-1 uses rental charges to represent movements in shelter costs of homeowners. Rental charges increased 0.2 percent in April. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This measure of homeownership costs increased 1.3 percent in April as a result of increases in house prices and mortgage interest rates.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.2 percent in April, following a 0.2 percent decline in March and moderate increases in the preceding 5 months. The food and beverage component advanced 0.3 percent, following a decline of 0.2 percent in March. Grocery store food prices also rose 0.3 percent as meat prices rose sharply. The housing component increased 0.9 percent in April, following an 0.3 percent decline in March. Homeownership costs increased sharply as home financing costs rose 2.1 percent. The index for fuel and utilities rose 0.1 percent. The transportation component declined for the fourth consecutive month—down 1.7 percent in April—primarily due to a 6.7 percent decline in gasoline prices. The index for medical care rose 1.0 percent, reflecting large increases in charges for hospital rooms and prices for prescription and nonprescription drugs and medical supplies. The index for apparel and upkeep increased 0.1 percent. The entertainment index rose 0.4 percent. The other goods and services component continued to advance, increasing 0.8 percent in April.

Homeownership Changes

On October 27, 1981, the Bureau of Labor Statistics announced its intention to change the way in which homeownership costs are measured for the Consumer Price Index. Effective with data for January 1983, the Consumer Price Index for All Urban Consumers (CPI-U) will incorporate a rental equivalence measure for homeownership costs. Effective with data for January 1985, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will also incorporate the rental equivalence approach. Details of these

NOTE: See Technical Notes for explanation of homeownership measures.

changes can be found in U.S. Department of Labor news release 81-506, October 27, 1981.

Postponement of Rebasing of Consumer Price Index

Because of severe budget constraints, the Bureau of Labor Statistics did not carry out the Government directive to rebase the Consumer Price Index and the Producer Price Index to the new U.S. Government 1977=100 reference base. Postponement was required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change. No alternative date for adopting the 1977 reference base has been set. All Items indexes on a 1977=100 reference base are available upon request from the Bureau.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

West/D	2	12/77	-	153.3	-	157.9	10.0	3.0	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.....November 1963=100.
Dallas-Fort Worth, Tex.....November 1963=100.
Honolulu, Hawaii.....December 1963=100.

[3] Indexes on a January 1961=100 base.

[4] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[5] Indexes are on the bases listed:

Atlanta, Ga.....December 1977=100.
Buffalo, N. Y.....February 1978=100.
Cleveland, Ohio.....February 1978=100.
Dallas-Fort Worth, Tex.....February 1978=100.
Honolulu, Hawaii.....December 1977=100.
Houston, Tex.....April 1978=100.
Kansas City, Mo.-Kans.....December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.....April 1978=100.
Pittsburgh, Pa.....April 1978=100.
San Francisco-Oakland, Calif.....December 1977=100.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y. .... November 1963=100.
Dallas-Fort Worth, Tex. .... November 1963=100.
Honolulu, Hawaii .... December 1963=100.

[3] Indexes on a January 1981=100 base.

[4] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[5] Indexes are on the bases listed:

Atlanta, Ga. .... December 1977=100.
Buffalo, N. Y. .... February 1978=100.
Cleveland, Ohio .... February 1978=100.
Dallas-Fort Worth, Tex. .... February 1978=100.
Honolulu, Hawaii .... December 1977=100.
Houston, Tex. .... April 1978=100.
Kansas City, Mo.-Kans. .... December 1977=100.
Minneapolis-St. Paul, Minn.-Wis. .... April 1978=100.
Pittsburgh, Pa. .... April 1978=100.
San Francisco-Oakland, Calif. .... December 1977=100.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[NA] Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[NA] Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978; and *CPI Issues*, Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $20 domestic, and $25 foreign. Single copy $3.50. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) both rose 1.0 percent before seasonal adjustment in May. The CPI-U rose to 287.1 and the CPI-W to 286.5 (1967=100), respectively. The All Items experimental measure using a rental equivalence approach (CPI-U, X-1) increased 0.7 percent to 260.6. Compared with their levels in May 1981, the CPI-U was 6.7 percent higher, the CPI-U, X-1 6.1 percent higher, and the CPI-W 6.5 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 1.0 percent in May, while the experimental CPI-U, X-1 increased 0.6 percent.

The 1.0 percent advance in the official CPI follows a 7-month period in which the average monthly increase was 0.3 percent. The acceleration in the May index was largely attributable to a turnaround in the transportation component. Gasoline prices, which had declined almost 15 percent over the period from March 1981 through April 1982 rose 0.9 percent in May. Further advances in the housing and food and beverage components also contributed to the upturn in consumer prices. On the other hand, the index for apparel and upkeep declined while increases in the other major categories of consumer spending were less than or the same as in April.

The transportation index advanced 0.4 percent in May, following a decline of 1.6 percent in April. The turnaround was due to the dramatic reversal in gasoline prices which accounted for over three-fifths of the acceleration in the overall CPI. Moderating the impact of the jump in gasoline prices were smaller increases in new and used car prices, which rose 0.3 and 0.1 percent, respectively. Automobile finance charges declined for the second consecutive month. Moderate increases were recorded for most other private transportation components. The index for public transportation rose 0.8 percent, the same as in April, again largely due to increases in airline and intercity train fares.

The housing component rose 1.4 percent in May, following a 0.8 percent increase in April, and accounted for about one-third of the acceleration in the overall CPI. Shelter costs advanced sharply for the second consecutive month. The index of home financing costs rose 1.7 percent as a 2.6 percent increase in house prices was partially offset by a 0.8 percent decline in mortgage interest rates. Charges for residential rent rose 0.8 percent in May, following a small increase in April. The index for fuel and other utilities also accelerated, rising 1.0 percent in May after recording no change in April. Charges for natural gas rose sharply for the fifth consecutive month while the index for electricity registered a small decline for the second month in a row. Fuel oil prices, which had declined sharply in the 2 preceding months, rose 0.7 percent in May.

The index for food and beverages rose 0.8 percent in May, compared with a 0.3 percent increase in April. Grocery store food prices also accelerated, advancing 1.0 percent, largely due to substantial increases in the indexes for meats, poultry, fish and eggs, and fruits and

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	Changes from preceding month							Compound annual rate 3 months ended May 1982	12 months ended May 1982
	1981		1982						
	November	December	January	February	March	April	May		
All items	0.5	0.4	0.3	0.2	-0.3	0.2	1.0	3.7	6.7
Food and beverages	.1	.1	.7	.6	-.3	.3	.8	2.9	4.8
Housing	.5	.4	.3	.4	-.3	.8	1.4	7.8	8.8
Apparel and upkeep	-.1	.1	-.1	.4	.4	.1	-.1	1.9	2.7
Transportation	.9	.6	-.2	-.7	-1.0	-1.6	.4	-8.2	2.8

Entertainment	.8	.3	.7	.7	.5	.3	.3	4.2	6.4
Other goods and services	.5	.6	.6	.9	1.0	.9	.7	10.5	9.8

vegetables. Beef, pork, and poultry prices all rose sharply, while egg prices declined for the third consecutive month. All other major grocery store food groups continued to record either moderate increases or small declines. Prices for the other two components of the food and beverage index—restaurant meals and alcoholic beverages—increased 0.4 and 0.1 percent, respectively.

The medical care index rose 0.9 percent in May, about the same as in recent months. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 0.8 percent. Charges for hospital rooms and physicians' services rose 0.8 and 0.6 percent, respectively.

The index for apparel and upkeep declined 0.1 percent in May. A decline in prices for women's and girls' clothing, reflecting early summer sales, was primarily responsible for the decrease. Partially offsetting this decline were moderate increases in the indexes for men's and boys' clothing, footwear, and apparel services.

The entertainment index rose 0.3 percent in May, the same as in April. The other goods and services component advanced 0.7 percent, somewhat less than in recent months. Increases in bank service charges and tobacco products were largely responsible for the May increase.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U using rent substitution (X-1) rose 0.6 percent in May. The official CPI-U rose 1.0 percent. The large difference in movement in May reflects the different treatment of homeownership costs in the two indexes. The CPI-U, X-1 uses rental charges to represent movements in shelter costs of homeowners. Rental charges increased 0.8 percent in May. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This measure of homeownership costs increased 1.8 percent in May as a result of a sharp increase in house prices.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers advanced 0.9 percent in May, after recording an increase of 0.2 percent in April. The food and beverage component rose 0.8 percent in May, following an increase of 0.3 percent in the preceding month. Grocery store food prices rose 1.0 percent, largely reflecting sharp price increases in meats and vegetables. The housing component increased 1.4 percent, the second consecutive large monthly increase. Shelter costs rose sharply as both homeownership costs and charges for rent accelerated. The index for fuel and utilities also increased substantially. The transportation component, which had declined in each of the preceding 4 months, increased 0.5 percent in May. The turnaround was due largely to the sharp reversal in gasoline prices, which increased 0.9 percent in May. The index for medical care advanced 0.8 percent. The apparel and upkeep component declined 0.4 percent, largely due to a decline in prices for women's and girls' clothing. The entertainment and other goods and services components rose 0.2 and 0.7 percent, respectively.

Homeownership Changes

On October 27, 1981, the Bureau of Labor Statistics announced its intention to change the way in which homeownership costs are measured for the Consumer Price Index. Effective with data for January 1983, the Consumer Price Index for All Urban Consumers (CPI-U) will incorporate a rental equivalence measure for homeownership costs. Effective with data for January 1985, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will also incorporate the rental equivalence approach. Details of these changes can be found in U.S. Department of Labor news release 81-506, October 27, 1981.

NOTE: See Technical Notes for explanation of homeownership measures.

Postponement of Rebasing of Consumer Price Index

Because of severe budget constraints, the Bureau of Labor Statistics did not carry out the Government directive to rebase the Consumer Price Index and the Producer Price Index to the new U.S. Government 1977=100 reference base. Postponement was required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change. No alternative date for adopting the 1977 reference base has been set. All Items indexes on a 1977=100 reference base are available upon request from the Bureau.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period b. For house price: Net expenditures (purchases minus sales) for houses during base period c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

[5] Indexes on a January 1981=100 base.

[6] Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[7] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978=100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska	January 1978=100.
Baltimore, Md.	March 1978=100.
Boston, Mass.	January 1978=100.
Cincinnati, Ohio-Ky.-Ind.	March 1978=100.
Denver-Boulder, Colo.	January 1978=100.
Miami, Fla.	November 1977=100.
Milwaukee, Wis.	November 1977=100.
Northeastern Pennsylvania	November 1977=100.
Portland, Oreg.-Wash.	January 1978=100.
St. Louis, Mo.-Ill.	March 1978=100.
San Diego, Calif.	November 1977=100.
Seattle-Everett, Wash.	November 1977=100.
Washington, D.C.-Md.-Va.	November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

West/D	2	12/77	153.2	–	157.9	–	–	–	–	10.1	3.1	–

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

San Diego, Calif	November 1977=100.
Seattle-Everett, Wash	November 1977=100.
Washington, D.C.-Md.-Va	November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978; and *CPI Issues,* Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

Productivity and the Economy: A Chartbook

***Productivity*. Everybody talks about it.**
What does it mean?
How does it affect wages and costs?
What does it have to do with employment?

This new chartbook, produced by the staff of the Bureau of Labor Statistics, answers questions in understandable—yet technically accurate—charts and captions.

The chartbook explains what productivity is, how it has changed over the years, and what factors have contributed to that change.

The 100 page chartbook, priced at $5.50, is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or you may send your order to the BLS regional office nearest you.

OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $20 domestic, and $25 foreign. Single copy $3.50. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 1.2 percent before seasonal adjustment in June to 290.6 (1967=100). Prior to seasonal adjustment, the All Items experimental measure using a rental equivalence approach (CPI-U, X-1) increased 1.0 percent to 263.2 and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 1.3 percent to 290.1. Compared with their levels in June 1981, the CPI-U was 7.1 percent higher, the CPI-U, X-1 was 6.5 percent higher, and the CPI-W was 6.9 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, both the CPI for All Urban Consumers and the experimental CPI-U, X-1 rose 1.0 percent in June. The 1.0 percent advance in the official CPI-U was the same as in May and substantially more than the 0.3 percent average monthly rate for the 7-month period ended in April. About three-fifths of the increase in the June index was due to higher prices for gasoline and houses. The medical care component also rose substantially. On the other hand, more moderate rates of increase were recorded for the food and beverage, entertainment, and other goods and services components. The index for apparel and upkeep rose only slightly in June.

During the first 6 months of 1982, the CPI-U increased at a seasonally adjusted annual rate of 5.1 percent, rising from an annual rate of 1.0 percent in the first quarter to 9.3 percent in the second. The sharp reversal in homeownership costs and energy prices, which had declined in the first 3 months, was largely responsible for the acceleration in the second quarter. The experimental CPI-U, X-1 rose at a 4.2 percent seasonally adjusted annual rate during the first half of 1982. The experimental measure rose at an annual rate of 2.7 percent in the first quarter and 5.8 percent in the second.

A 5.4 percent increase in gasoline prices in June accounted for about three-fourths of the 2.1 percent increase in the transportation index. Despite the sharp increase, gasoline prices in June 1982 were 9.4 percent below the peak level of March 1981. New and used car prices rose 0.7 and 0.2 percent, respectively. Automobile finance charges increased sharply, following declines earlier this year. Charges for automobile insurance and automobile maintenance and repair costs advanced more than in recent months. The index for public transportation rose 1.0 percent, largely due to increases in airline fares.

The housing component rose 1.0 percent in June, following a 1.4 percent increase in May. Shelter costs advanced sharply for the third consecutive month. The index of home financing costs rose 1.2 percent as a 2.3 percent increase in house prices was partially offset by a 0.8 percent decline in mortgage interest rates. Charges for residential rent rose 0.4 percent. The index for fuel and other utilities increased 1.0 percent in June, the same as in May. Charges for natural gas rose sharply for the sixth consecutive month while the index for electricity rose moderately, following declines in the preceding 2 months. The 2.1 percent advance in fuel oil prices follows a moderate increase in May and sharp

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended June 1982	12 months ended June 1982
	1981	1982							
	December	January	February	March	April	May	June

Transportation	.6	-.2	-.7	-1.0	-1.6	.4	2.1	3.7	4.6
Medical care	.7	.8	.7	1.0	1.0	.9	.9	11.8	12.0
Entertainment	.3	.7	.7	.5	.3	.3	.7	5.1	6.7
Other goods and services	.6	.6	.9	1.0	.9	.7	.6	8.8	9.6

declines earlier this year. The index for household furnishings and operations rose 0.1 percent.

The index for food and beverages rose 0.6 percent in June compared with a 0.8 percent increase in May. Grocery store food prices advanced 0.8 percent, largely due to substantial increases in the indexes for meats, poultry, fish and eggs, and fresh fruits and vegetables. Beef and pork prices rose sharply, while poultry prices declined slightly, following seasonal adjustment. Egg prices registered a sharp decrease for the fourth consecutive month. All other major grocery store food groups continued to record either small declines or moderate increases. Prices for the other two components of the food and beverage index—restaurant meals and alcoholic beverages—each increased 0.5 percent.

The medical care index rose 0.9 percent in June, about the same as in recent months. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 0.6 percent. Charges for hospital rooms and physicians' services rose 1.0 and 0.7 percent, respectively.

The index for apparel and upkeep rose 0.1 percent in June, following seasonal adjustment. Moderate increases in apparel services and footwear offset price declines in most clothing items. The entertainment and other goods and services components advanced 0.7 and 0.6 percent, respectively.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U using rent substitution (X-1) rose 1.0 percent in June the same as the official CPI-U. Rental charges increased 0.4 percent in June. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This measure of homeownership costs increased 1.4 percent in June as a result of a sharp increase in house prices. Increases in the overall indexes were the same despite the differences in the behavior of the homeownership components because of differences in weights and seasonal adjustment methods between the two measures.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers advanced 1.0 percent in June, following a 0.9 percent increase in May. The food and beverage component rose 0.6 percent. Grocery store food prices increased 0.7 percent, largely reflecting sharp price increases in meats and fresh fruits and vegetables. Rising homeownership costs accounted for about three-fourths of the 1.0 percent increase in the housing component. The index for fuel and other utilities also increased substantially. The transportation component registered a 2.0 percent increase in June, as gasoline prices rose 5.4 percent. New and used car prices rose 0.6 and 0.2 percent, respectively. The index for medical care advanced 0.9 percent. The apparel and upkeep component rose 0.2 percent in June, following seasonal adjustment. The indexes for entertainment and other goods and services rose 0.7 and 0.5 percent, respectively.

Homeownership Changes

On October 27, 1981, the Bureau of Labor Statistics announced its intention to change the way in which homeownership costs are measured for the Consumer Price Index. Effective with data for January 1983, the Consumer Price Index for All Urban Consumers (CPI-U) will incorporate a rental equivalence measure for homeownership costs. Effective with data for January 1985, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will also incorporate the rental equivalence approach. Details of these changes can be found in U.S. Department of Labor news release 81-506, October 27, 1981.

Postponement of Rebasing of Consumer Price Index

Because of severe budget constraints, the Bureau of Labor Statistics did not carry out the Government directive to rebase the Consumer Price Index and the

NOTE: See Technical Notes for explanation of homeownership measures.

Producer Price Index to the new U.S. Government 1977=100 reference base. Postponement was required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change. No alternative date for adopting the 1977 reference base has been set. All Items indexes on a 1977=100 reference base are available upon request from the Bureau.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

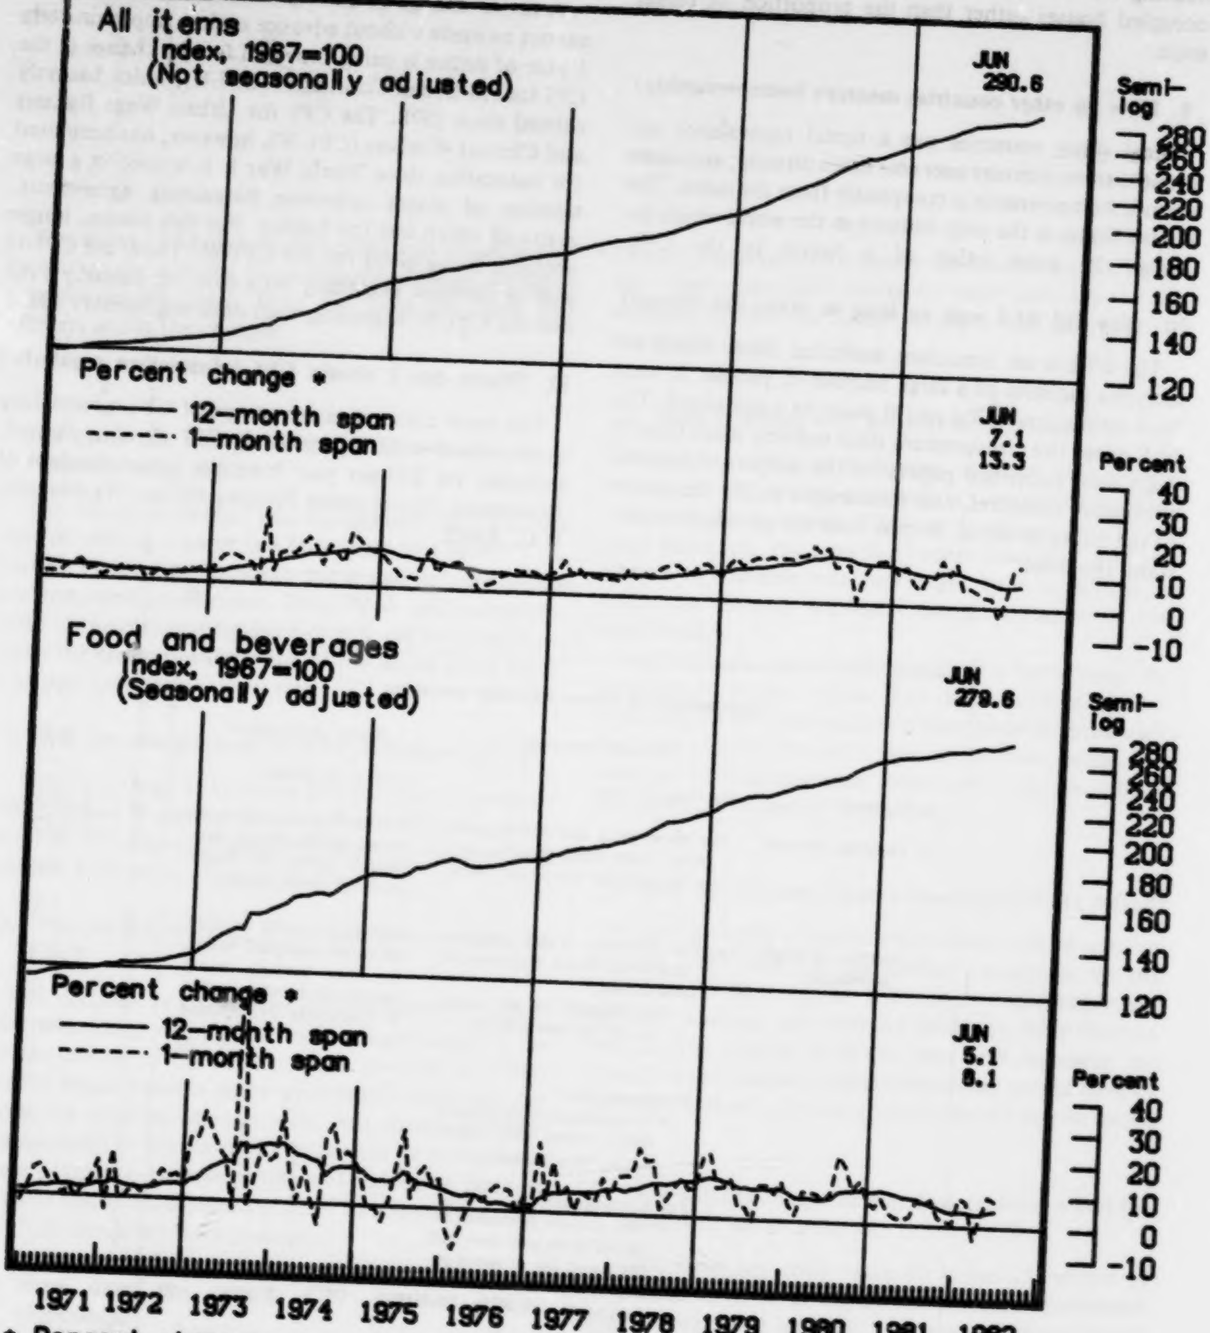
12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

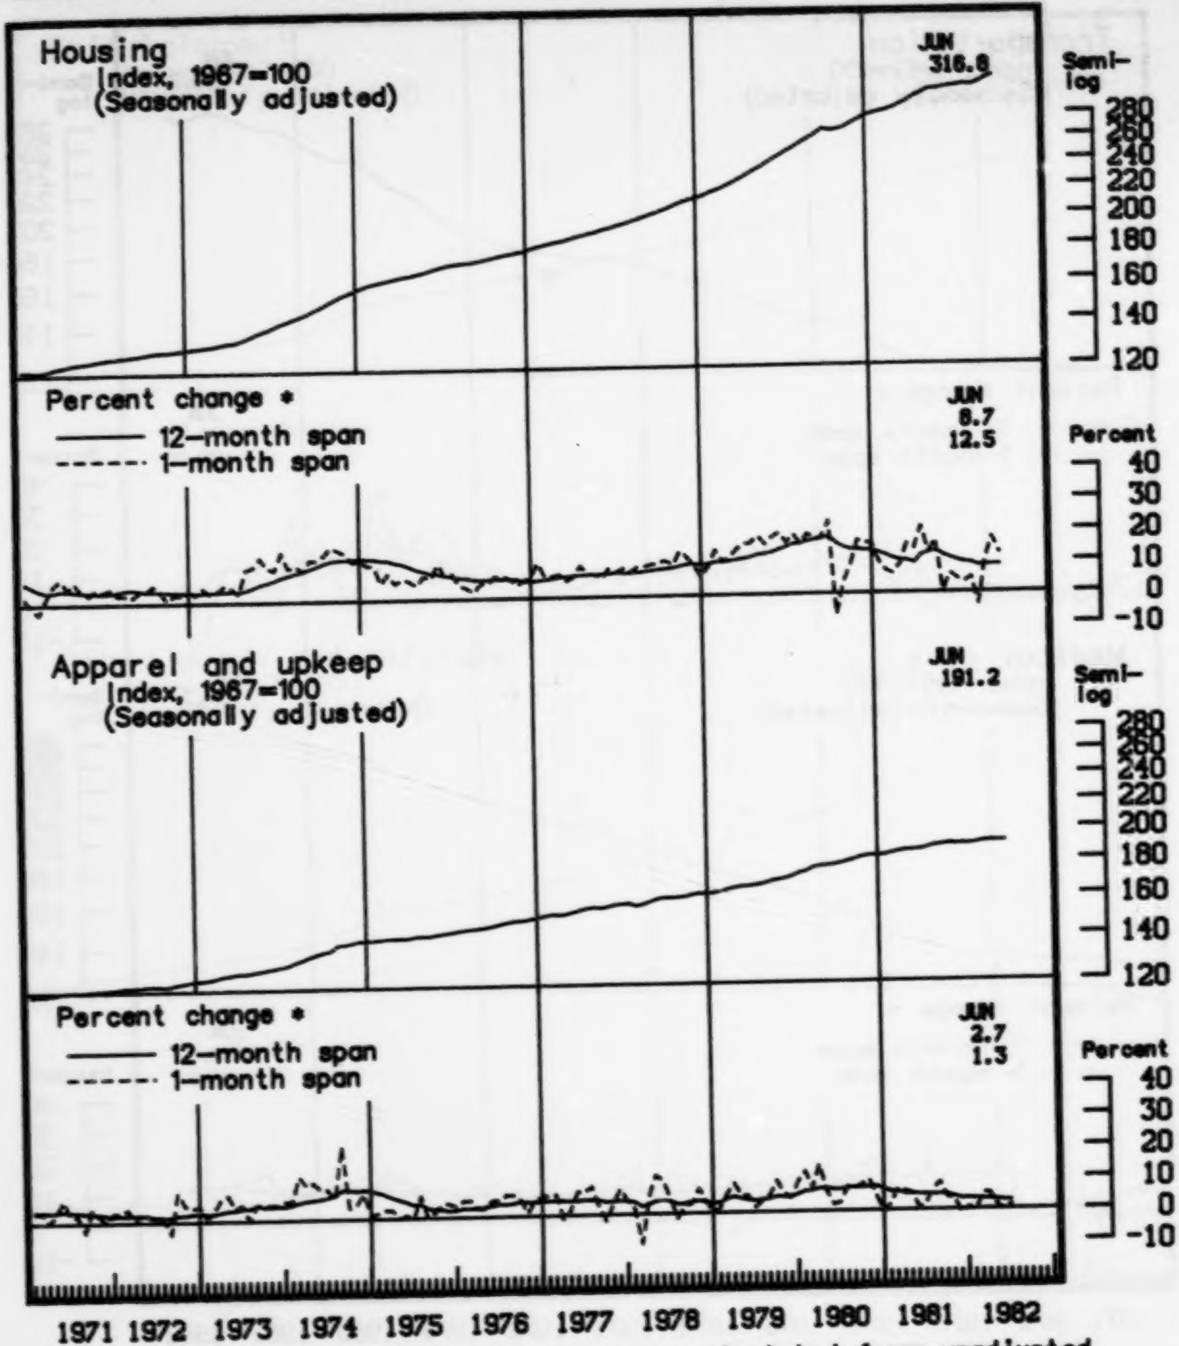
	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

Chart 1. CPI-U: All items, food and beverages, 1971-82



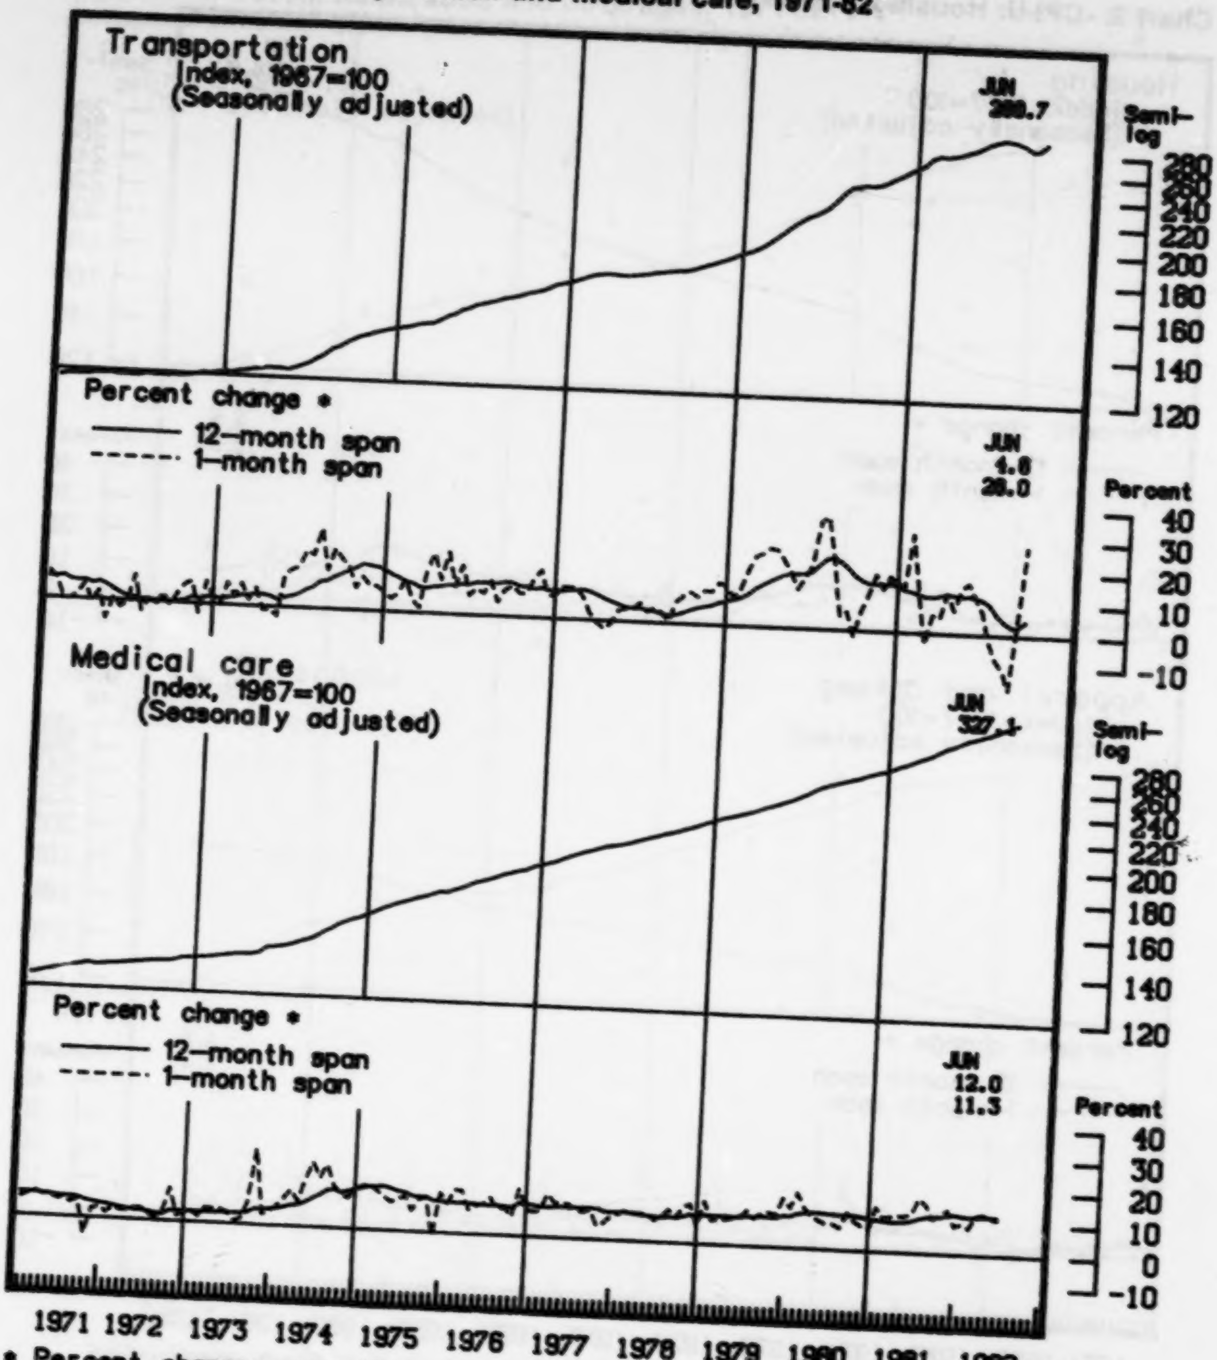
* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Chart 2. CPI-U: Housing, apparel and upkeep, 1971-82



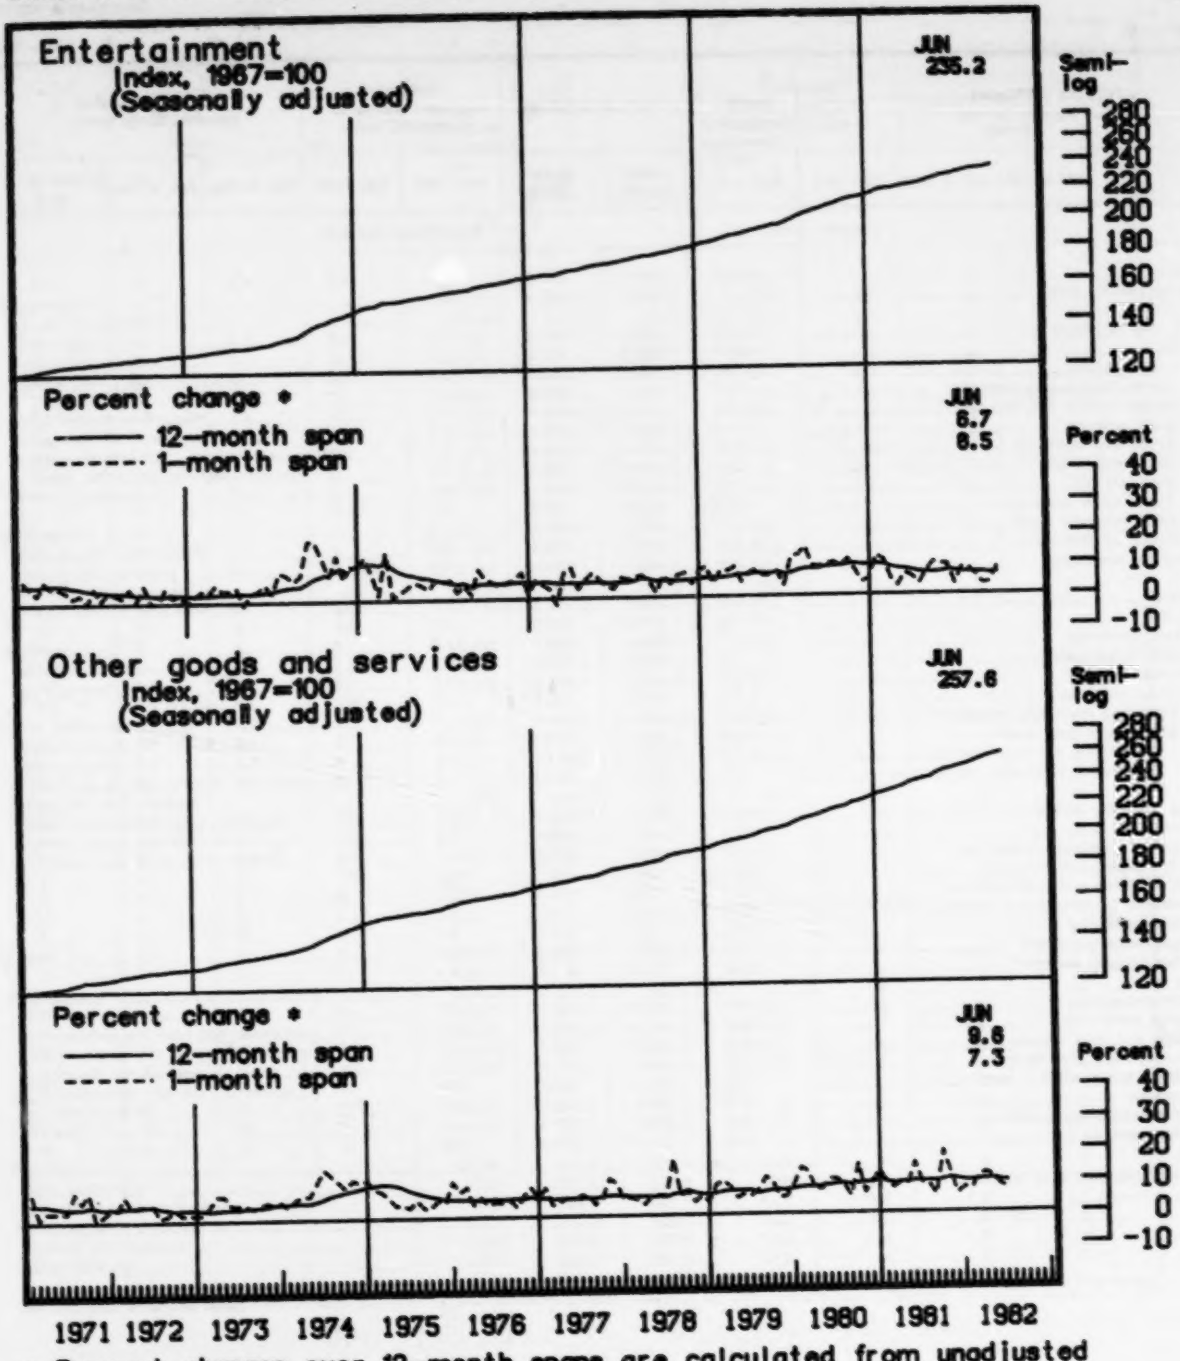
* Percent changes over 12—month spans are calculated from unadjusted data. Percent changes over 1—month spans are annual rates calculated from seasonally adjusted data.

Chart 3. CPI-U: Transportation and medical care, 1971-82



* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Chart 4. CPI-U: Entertainment, other goods and services, 1971-82



* Percent changes over 12–month spans are calculated from unadjusted data. Percent changes over 1–month spans are annual rates calculated from seasonally adjusted data.

West/D	2	12/77	-	157.9	-	159.9	6.8	1.3	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963=100.
Dallas-Fort Worth, Tex.	November 1963=100.
Honolulu, Hawaii	December 1963=100.

[3] Indexes on a January 1981=100 base.

[4] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[5] Indexes are on the bases listed:

Atlanta, Ga.	December 1977=100.
Buffalo, N. Y.	February 1978=100.
Cleveland, Ohio	February 1978=100.
Dallas-Fort Worth, Tex.	February 1978=100.
Honolulu, Hawaii	December 1977=100.
Houston, Tex.	April 1978=100.
Kansas City, Mo.-Kans.	December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978=100.
Pittsburgh, Pa.	April 1978=100.
San Francisco-Oakland, Calif.	December 1977=100.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

West/D	2	12/77	-	157.9	-	159.8	8.9	1.2	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

Services less medical care	179.3	13.2	1.1	172.4	8.7	.9	151.8	1.1	-3.8	172.9	15.0	.6

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

** Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[5] Includes direct pricing of gasohol as of September 1981.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

NA Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index*, by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index*, by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978; and *CPI Issues*, Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $20 domestic, and $25 foreign. Single copy $3.50. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) both increased 0.6 percent before seasonal adjustment in July. The CPI-U rose to a level of 292.2 and the CPI-W to 291.8 (1967=100). The all items experimental measure using a rental equivalence approach (CPI-U, X-1) increased 0.7 percent to 265.0. Compared with their levels in July 1981, the CPI-U was 6.5 percent higher, the CPI-U, X-1 was 6.4 percent higher, and the CPI-W was 6.3 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.6 percent while the experimental CPI-U, X-1 increased 0.8 percent.

The July advance of 0.6 percent in the official CPI-U compares with increases of 1.0 percent in each of the preceding two months and substantially smaller changes earlier this year. Most of the slowdown in July was attributable to the deceleration in the housing, transportation, and food and beverage components. In particular, a slowing in the rise of homeownership costs, a smaller increase in gasoline prices, and a decline in prices for fruits and vegetables were responsible for the moderation. On the other hand, the index for apparel and upkeep increased more than in recent months. Other major categories of consumer spending—medical care, entertainment, and other goods and services—rose about the same as in June.

The housing component rose 0.5 percent in July, substantially less than in recent months. Homeownership costs, which had been primarily responsible for the large increases, rose 0.4 percent. House prices advanced 0.7 percent, while mortgage interest rates declined for the third consecutive month. Smaller increases in the prices for fuels and other utilities also contributed to the deceleration in the housing component. Fuel oil prices advanced 0.6 percent, following a 2.1 percent increase in June. Charges for natural gas rose 0.9 percent, while the index for electricity was unchanged. On the other hand, the index for rent advanced 1.0 percent in July, noticeably more than in most recent months. The index for household furnishings and operations rose 0.4 percent.

Increases in the prices for gasoline and used cars accounted for over two-thirds of the 1.2 percent rise in the transportation component. Gasoline prices registered a 2.0 percent advance in July, following a 5.4 percent increase in June. Despite a 8.4 percent rise in the past 3 months, gasoline prices were still 7.7 percent below the peak level of March 1981. New and used car prices rose 0.5 and 1.6 percent, respectively. Automobile finance charges—up 0.8 percent—increased for the second consecutive month, following declines earlier this year. The index for public transportation rose 0.5 percent.

The food and beverage component was unchanged in July as a decrease in grocery store food prices was offset by moderate increases in the indexes for restaurant meals and alcoholic beverages. The 0.4 percent decline in grocery store food prices follows increases of 1.0 percent in May and 0.8 percent in June. A sharp

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended July 1982	12 months ended July 1982
	1982								
	January	February	March	April	May	June	July		
All items	0.3	0.2	-0.3	0.2	1.0	1.0	0.6	10.8	6.5
Food and beverages	.7	.6	-.3	.3	.8	.6	0	5.6	4.4
Housing	.3	.4	-.3	.8	1.4	1.0	.5	12.0	7.5

Transportation	-.2	-.7	-1.0	-1.6	.4	2.1	1.2	15.7	4.8
Medical care	.8	.7	1.0	1.0	.9	.9	1.0	12.0	11.6
Entertainment	.7	.7	.5	.3	.3	.7	.6	6.3	7.0
Other goods and services	.6	.9	1.0	.9	.7	.6	.7	8.3	9.7

decline in prices for fresh fruits and vegetables was largely responsible for the drop. The index for meats, poultry, fish, and eggs was unchanged in July, following substantial increases in each of the preceding 3 months. Beef and poultry prices both declined, while pork prices rose less than in recent months. Egg prices, however, rose sharply, after registering declines in each of the preceding 4 months. The index for dairy products which had risen only 1.0 percent during the entire previous 12 month period, rose 0.5 percent in July. As was true last month, most other major grocery store food groups recorded small declines or very moderate increases.

The medical care index rose 1.0 percent in July, about the same as in recent months. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 0.6 percent. Charges for hospital rooms and physicians' services rose 1.7 and 0.7 percent, respectively.

The index for apparel and upkeep rose 0.5 percent in July. This compares with an increase of 1.0 percent during the first 6 months of 1982. Seasonal price reductions were prevalent, but most clothing items registered small increases, following seasonal adjustment. Charges for apparel services rose 1.0 percent in July.

The indexes for entertainment and other goods and services rose 0.6 and 0.7 percent, respectively.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U using rent substitution (X-1) rose 0.8 percent in July. The official CPI-U rose 0.6 percent. The difference in July reflects the different treatment of homeownership costs in the two indexes. The CPI-U, X-1 uses rental charges to represent movements in shelter costs of homeowners. Rental charges increased 1.0 percent in July. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This measure of homeownership costs increased 0.4 percent in July.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers advanced 0.6 percent in July, following a 1.0 percent increase in June. The food and beverage component was unchanged as a decline in grocery store food prices was offset by moderate increases in the indexes for restaurant meals and alcoholic beverages. The 0.3 percent decline in the index for grocery store foods was largely attributable to a decrease in prices for fresh fruits and vegetables and a deceleration in meat prices. The housing component increased 0.6 percent in July, following a 1.0 percent rise in June. Homeownership costs increased, but by much less than in recent months. House prices rose 0.8 percent and mortgage interest rates declined for the third consecutive month. The index for fuel and other utilities also slowed considerably. The transportation component registered a 1.2 percent increase in July, as gasoline prices rose 1.9 percent. New and used car prices rose 0.6 and 1.6 percent, respectively. The index for medical care advanced 1.0 percent. The apparel and upkeep component rose 0.4 percent in July, following seasonal adjustment. The indexes for entertainment and other goods and services rose 0.8 and 0.7 percent, respectively.

Homeownership Changes

On October 27, 1981, the Bureau of Labor Statistics announced its intention to change the way in which homeownership costs are measured for the Consumer Price Index. Effective with data for January 1983, the Consumer Price Index for All Urban Consumers (CPI-U) will incorporate a rental equivalence measure for homeownership costs. Effective with data for January 1985, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will also incorporate the rental equivalence approach. Details of these changes can be found in U.S. Department of Labor news release 81-506, October 27, 1981.

[1] Residential rent, not seasonally adjusted.

NOTE: See Technical Notes for explanation of homeownership measures.

Postponement of Rebasing of Consumer Price Index

Because of severe budget constraints, the Bureau of Labor Statistics did not carry out the Government directive to rebase the Consumer Price Index and the Producer Price Index to the new U.S. Government 1977=100 reference base. Postponement was required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change. No alternative date for adopting the 1977 reference base has been set. All Items indexes on a 1977=100 reference base are available upon request from the Bureau.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

[5] Indexes on a January 1981=100 base.

[6] Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[7] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978=100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska................January 1978=100.
Baltimore, Md........................March 1978=100.
Boston, Mass..........................January 1978=100.
Cincinnati, Ohio-Ky.-Ind.........March 1978=100.
Denver-Boulder, Colo............January 1978=100.
Miami, Fla..............................November 1977=100.
Milwaukee, Wis......................November 1977=100.
Northeastern Pennsylvania...November 1977=100.
Portland, Oreg.-Wash............January 1978=100.
St. Louis, Mo.-Ill...................March 1978=100.
San Diego, Calif.....................November 1977=100.
Seattle-Everett, Wash...........November 1977=100.
Washington, D.C.-Md.-Va.....November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 18) will appear next month.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

[5] Indexes on a January 1981=100 base.

[6] Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[7] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978=100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska	January 1978=100.
Baltimore, Md.	March 1978=100.
Boston, Mass.	January 1978=100.
Cincinnati, Ohio-Ky.-Ind.	March 1978=100.
Denver-Boulder, Colo.	January 1978=100.
Miami, Fla.	November 1977=100.
Milwaukee, Wis.	November 1977=100.
Northeastern Pennsylvania	November 1977=100.
Portland, Oreg.-Wash.	January 1978=100.
St. Louis, Mo.-Ill.	March 1978=100.
San Diego, Calif.	November 1977=100.
Seattle-Everett, Wash.	November 1977=100.
Washington, D.C.-Md.-Va.	November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978; and *CPI Issues,* Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $28 domestic, and $35 foreign. Single copy $5. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.2 percent in August before seasonal adjustment. Prior to seasonal adjustment, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) and the all items experimental measure using a rental equivalence approach (CPI-U, X-1) also increased 0.2 percent. On a 1967=100 basis, the CPI-U rose to a level of 292.8, the CPI-W to 292.4, and the CPI-U, X-1 to 265.5. Compared with their levels in August 1981, the CPI-U and CPI-U, X-1 were 5.9 percent higher and the CPI-W was 5.8 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers and the experimental CPI-U, X-1 increased 0.3 percent in August.

The August advance of 0.3 percent in the official CPI-U followed increases of 0.6 percent in July and 1.0 percent in both May and June. Much of the slowdown in August was due to a sharp deceleration in the increase in the transportation component and a decline in food prices. Other major categories of consumer spending contributed slightly to the moderation. During the first 8 months of 1982, the CPI-U rose at a seasonally adjusted annual rate of 5.1 percent.

The index for food and beverages registered a decline of 0.3 percent in August. Grocery store food prices—down 0.6 percent—declined for the second consecutive month, largely as a result of declines in prices for beef, eggs, and fresh fruits and vegetables. Prices for pork and poultry increased. The index for dairy products was unchanged in August, continuing the moderating trend evident since early 1981. Other major grocery store food groups recorded moderate increases in August. Restaurant meal and alcoholic beverage prices both increased 0.5 percent.

The transportation component rose 0.3 percent in August, following sharp increases in each of the preceding 2 months. The moderation was largely attributable to the reversal in gasoline prices, which declined 0.1 percent in August after increasing a total of 8.4 percent in the preceding 3-month period. A smaller, but still substantial, increase in used car prices also contributed to the slowdown. New car prices rose 0.5 percent, the same as in July, reflecting the termination of rebate programs offered by some domestic manufacturers. Automobile finance charges—up sharply in June and July—registered a slight decline. The index for public transportation rose 0.3 percent in August, compared with 0.5 percent in July.

The housing component increased 0.4 percent in August, compared with 0.5 percent in July and substantially larger increases in the preceding 3 months. Shelter costs rose moderately for the second consecutive month. The index for rent advanced 0.5 percent, following an increase of 1.0 percent in July. Homeownership costs—up 0.4 percent—registered the same increase as the preceding month. Home financing costs rose 0.5 percent, reflecting 0.6 percent increase in mortgage interest rates and a 0.1 percent rise in house prices. The index for fuels and utilities advanced 0.8 percent in August, following a 0.5 percent increase in July,

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended August 1982	12 months ended August 1982
	1982								
	February	March	April	May	June	July	August		
All items	0.2	-0.3	0.2	1.0	1.0	0.6	0.3	7.9	5.9
Food and beverages	.6	-.3	.3	.8	.6	0	-.3	1.4	3.6
Housing	.4	-.3	.8	1.4	1.0	.5	.4	7.9	6.8
Apparel and upkeep	.4	.4	.1	-.1	.1	.5	.4	3.8	2.3
Transportation	-.7	-1.0	-1.6	.4	2.1	1.2	.3	15.0	4.4
Medical care	.7	1.0	1.0	.9	.9	1.0	.9	11.8	11.4
Entertainment	.7	.5	.3	.3	.7	.6	.4	6.8	6.8
Other goods and services	.9	1.0	.9	.7	.6	.7	.4	7.1	9.6

largely due to a sharp increase in the index for electricity. The index for household furnishings and operations declined 0.2 percent.

The medical care index rose 0.9 percent in August, about the same as in recent months. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, also increased 0.9 percent. Charges for hospital rooms and physicians' services rose 0.9 and 0.5 percent, respectively.

The index for apparel and upkeep rose 0.4 percent in August, compared with 0.5 percent in July and an increase of 1.0 percent during the first 6 months of 1982. Women's and girls' clothing was largely responsible for the increase. Charges for apparel services rose 0.5 percent in August.

The indexes for both entertainment and other goods and services increased 0.4 percent.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U all items index using rent substitution (X-1) rose 0.3 percent in August, the same as the official CPI-U. The CPI-U, X-1 uses rental charges to represent movements in shelter costs of homeowners. Rental charges increased 0.5 percent in August. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This measure of homeownership costs increased 0.4 percent in August.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers advanced 0.3 percent in August, following a 0.6 percent increase in July. The food and beverage index declined 0.3 percent in August, after registering no change the preceding month. Price declines were recorded for meats, eggs, and fresh fruits and vegetables. The housing component increased 0.5 percent in August, following a 0.6 percent rise in July. Shelter costs advanced 0.6 percent, the same as in July. The index for transportation moderated sharply, increasing 0.3 percent in August, following substantial increases in June and July. A decline in gasoline prices was primarily responsible for the slowdown. New and used car prices rose 0.5 and 0.9 percent, respectively. The index for medical care rose 0.9 percent. The index for apparel and upkeep rose 0.3 percent, following seasonal adjustment. The indexes for entertainment and other goods and services rose 0.3 and 0.4 percent, respectively.

Homeownership Changes

As announced on October 27, 1981, the Bureau of Labor Statistics will change the way in which homeownership costs are measured in the CPI. Effective with release of data for January 1983, on February 25, the homeownership component of the official CPI-U will be a rental equivalence measure, similar to the present CPI-U, X-1 experimental measure, but with some refinements. Effective with data for January 1985, the CPI-W will be revised to a rental equivalence measure. Monthly publication of the CPI experimental alternative homeownership measures CPI-U, X-1 through CPI-U, X-5 will cease at the time the change to a rental equivalence measure is made in the official CPI-U.

The new homeownership component will be introduced into the CPI in such a manner that the indexes using the old and new methodologies will be equal in the so-called link month—December 1982 for the CPI-U and December 1984 for the CPI-W. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, BLS will make available to users, for a 6-month overlap period after the change in the official indexes, calculations based on the current treatment of homeownership. In the case of the CPI-U, the overlap period will run from January to June 1983; for the CPI-W, the overlap period will run from January to June 1985.

Three refinements in procedures and calculation methods now used in the current experimental measure

[1] Residential rent, not seasonally adjusted.

NOTE: See Technical Notes for explanation of homeownership measures.

CPI-U, X-1 will be introduced in the CPI-U beginning with data for January 1983. First, BLS is reweighting the individual rental units in the CPI sample so that they will represent owner-occupied housing units instead of renter-occupied units. The current sample of rental units was selected, using a probability-based technique, from the renter-occupied units in selected neighborhoods in each CPI pricing area. New weights will be assigned to the housing units in the sample so that they will represent the owner-occupied housing units in their neighborhoods, CPI areas, and, ultimately, all urban places in the United States.

Second, the expenditure weight for rental equivalence, which for the experimental index, X-1, was calculated by means of a short-cut method, is being recalculated using the complex statistical estimating procedure used for weights in the official CPI. In addition, the weights associated with other homeowner expenditures for such things as insurance, appliances, and maintenance and repairs are being modified to be consistent with the rental equivalence concept. This enhancement will improve the quality of the national CPI's rental equivalence weight and will provide weights for computation of local area CPI-U's using the rental equivalence approach.

Finally, the computer system which produces the CPI each month is being expanded to accommodate the calculation, with complete item and geographic detail, of a CPI-U, which employs the rental equivalence approach.

The Bureau is also augmenting the rent sample in order to enhance the rental equivalence measure. This new sampling will be concentrated in areas where the housing is predominantly owner-occupied in order to increase the proportion of rental units that have characteristics similar to owner-occupied units. In addition, BLS will continue to work on refinements in the statistical estimating techniques used in the rental equivalence measure.

Postponement of Rebasing of Consumer Price Index

Because of severe budget constraints, the Bureau of Labor Statistics did not carry out the Government directive to rebase the Consumer Price Index and the Producer Price Index to the new U.S. Government 1977=100 reference base. Postponement was required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change. No alternative date for adopting the 1977 reference base has been set. All Items indexes on a 1977=100 reference base are available upon request from the Bureau.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

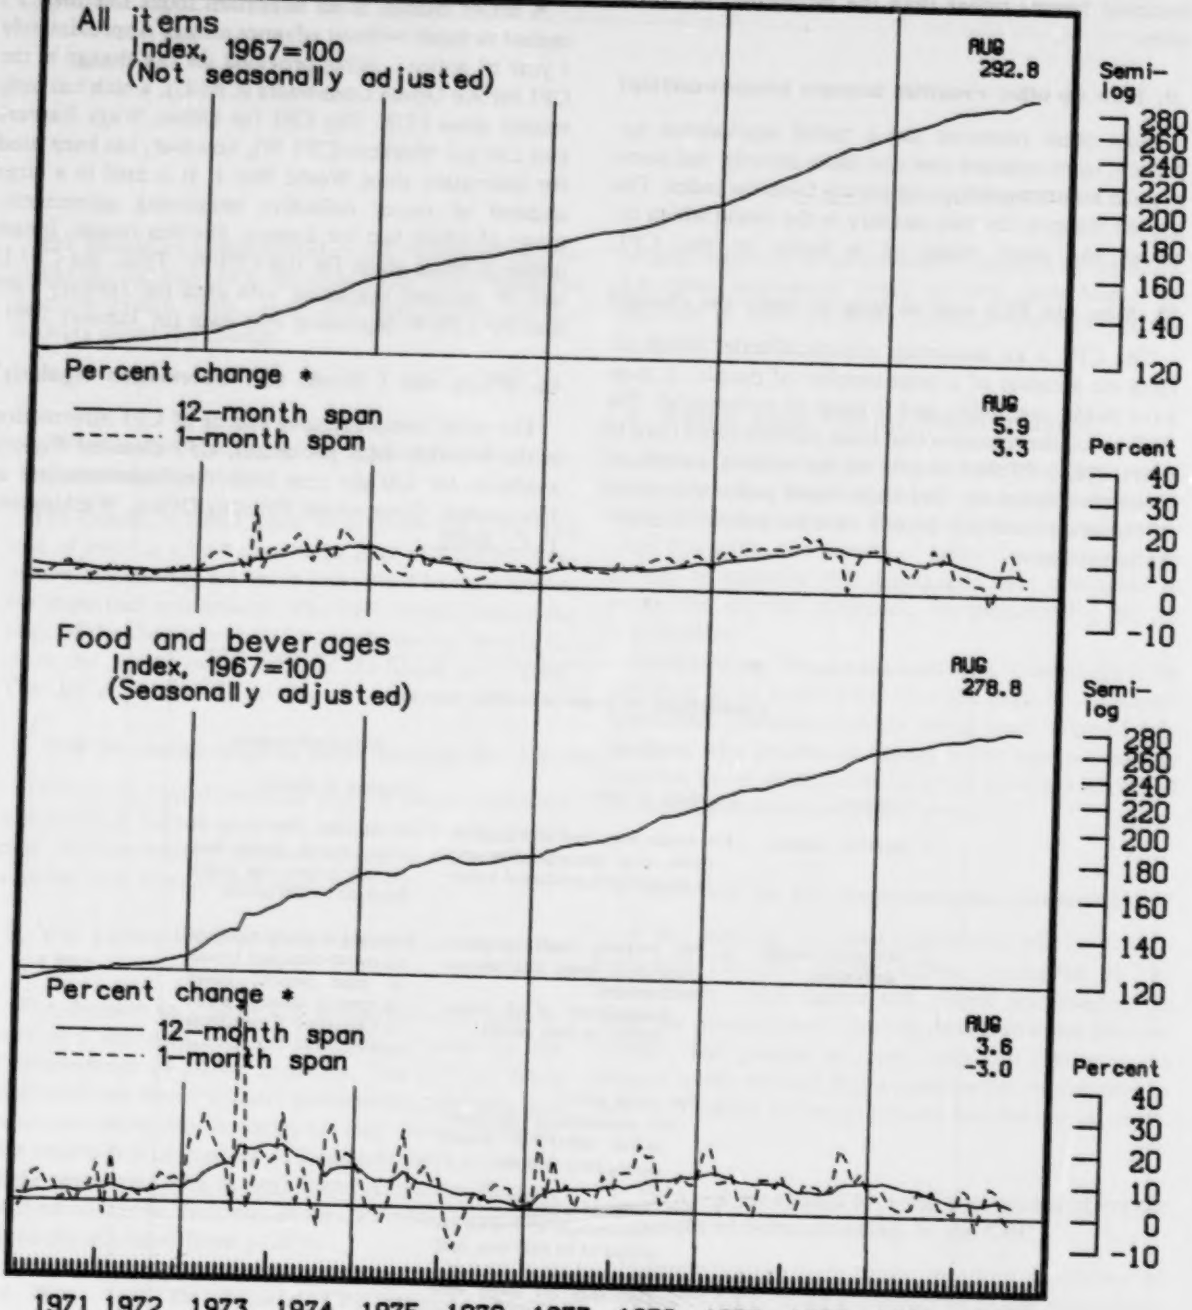
12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

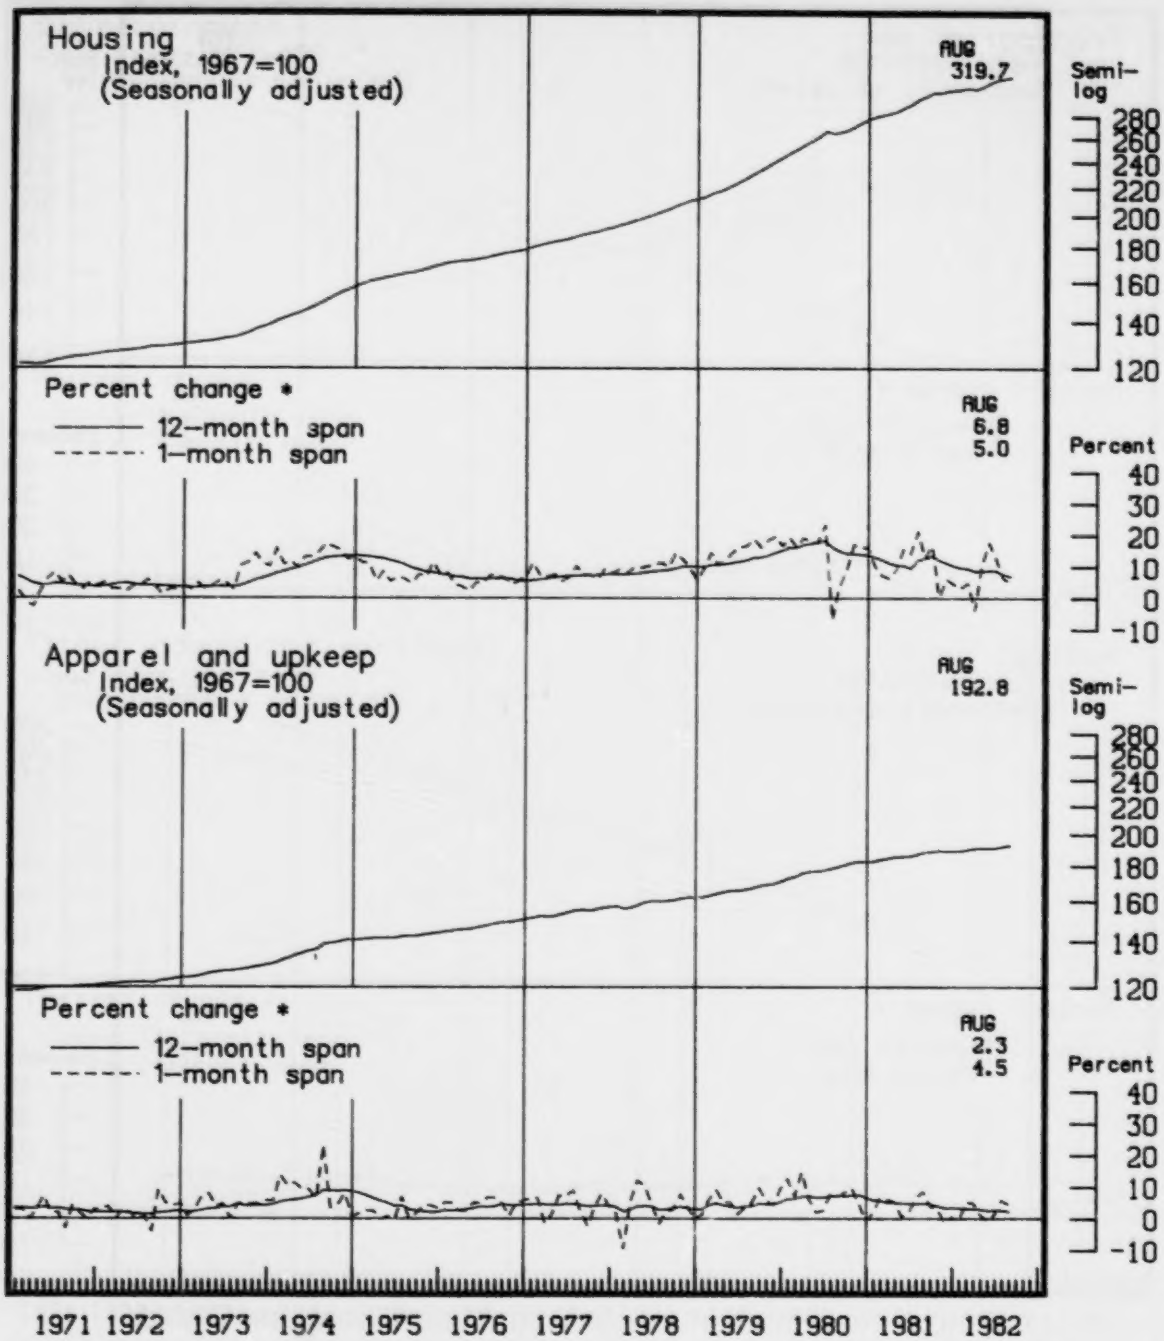
	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

Chart 1. CPI-U: All items, food and beverages, 1971-82



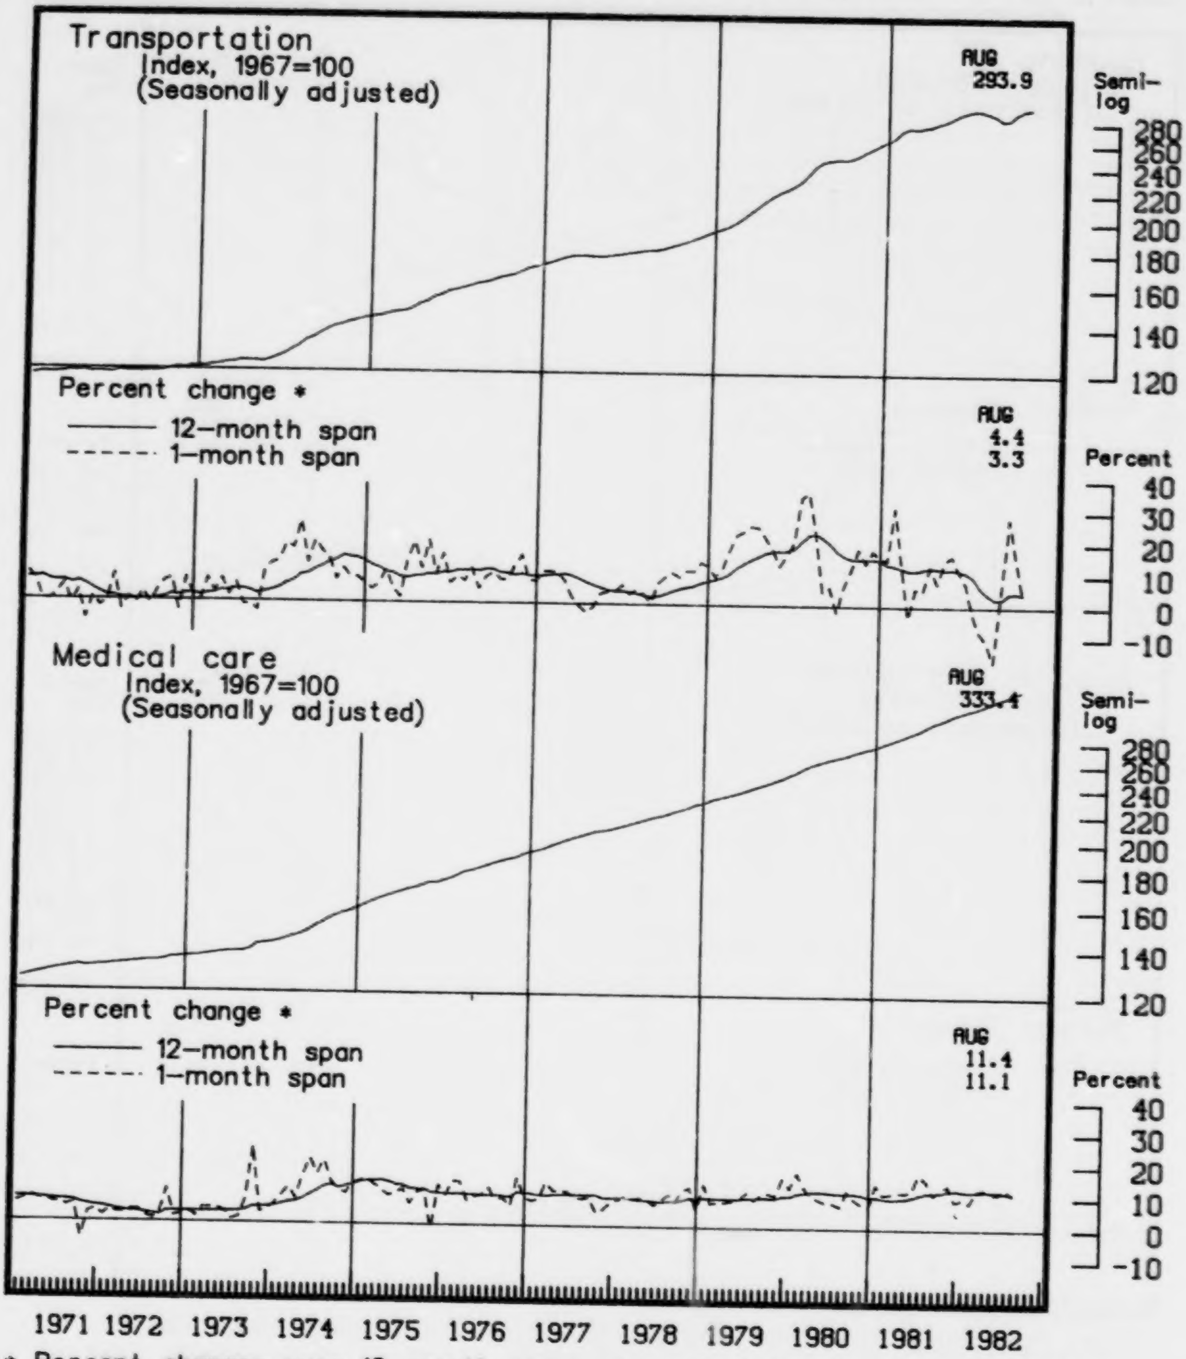
* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Chart 2. CPI-U: Housing, apparel and upkeep, 1971-82



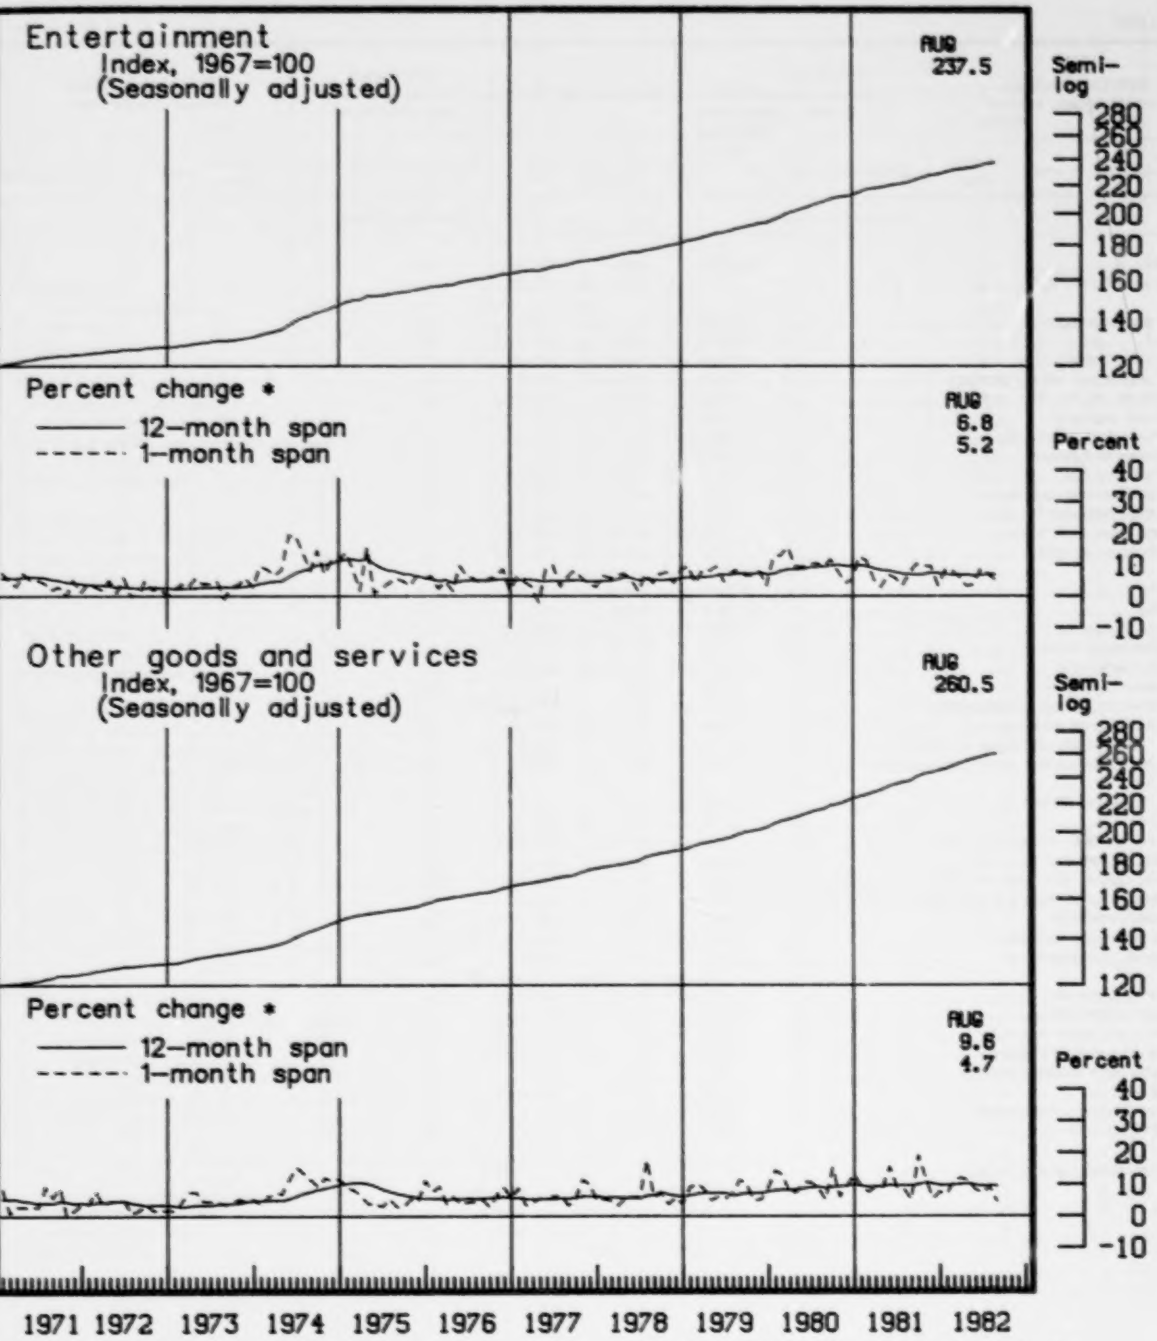
* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Chart 3. CPI-U: Transportation and medical care, 1971-82



* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Chart 4. CPI-U: Entertainment, other goods and services, 1971-82



* Percent changes over 12—month spans are calculated from unadjusted data. Percent changes over 1—month spans are annual rates calculated from seasonally adjusted data..

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963=100.
Dallas-Fort Worth, Tex.	November 1963=100.
Honolulu, Hawaii	December 1963=100.

[3] Indexes on a January 1981=100 base.

[4] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[5] Indexes are on the bases listed:

Atlanta, Ga.	December 1977=100.
Buffalo, N. Y.	February 1978=100.
Cleveland, Ohio	February 1978=100.
Dallas-Fort Worth, Tex.	February 1978=100.
Honolulu, Hawaii	December 1977=100.
Houston, Tex.	April 1978=100.
Kansas City, Mo.-Kans.	December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978=100.
Pittsburgh, Pa.	April 1978=100.
San Francisco-Oakland, Calif.	December 1977=100.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963=100.
Dallas-Fort Worth, Tex.	November 1963=100.
Honolulu, Hawaii	December 1963=100.

[3] Indexes on a January 1981=100 base.

[4] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[5] Indexes are on the bases listed:

Atlanta, Ga.	December 1977=100.
Buffalo, N. Y.	February 1978=100.
Cleveland, Ohio	February 1978=100.
Dallas-Fort Worth, Tex.	February 1978=100.
Honolulu, Hawaii	December 1977=100.
Houston, Tex.	April 1978=100.
Kansas City, Mo.-Kans.	December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978=100.
Pittsburgh, Pa.	April 1978=100.
San Francisco-Oakland, Calif.	December 1977=100.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] North Central revised indexes: April 1982=159.8; June 1982=169.7

[4] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[5] North Central revised indexes: March 1982=160.2; April 1982=158.9; May 1982=162.5; June 1982=169.8

[6] North Central revised indexes: March 1982=149.6; April 1982=149.5; May 1982=153.5; June 1982=160.8

[7] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[8] Includes direct pricing of gasohol as of September 1981.

[9] North Central revised indexes: March 1982=176.4; April 1982=171.7; May 1982=175.6; June 1982=185.8

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Size Class D revised indexes: April 1982=153.4; June 1982=158.2

[4] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[5] Size Class D revised indexes: March 1982=155.1; April 1982=152.7; May 1982=157.7; June 1982=159.6

[6] Size Class D revised indexes: March 1982=139.8; April 1982=139.2; May 1982=145.5; June 1982=146.7

[7] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[8] Includes direct pricing of gasohol as of September 1981.

[9] Size Class D revised indexes: March 1982=175.1; April 1982=169.1; May 1982=172.8; June 1982=178.9

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Northeast/B revised index: June 1982=176.8

[4] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[5] Northeast/B revised indexes: May 1982=192.1; June 1982=194.2

[6] Northeast/B revised indexes: May 1982=165.5; June 1982=166.6

[7] Northeast/B revised indexes: May 1982=190.9; June 1982=196.0

[8] North Central/D revised indexes: April 1982=160.8; June 1982=164.5

[9] North Central/D revised indexes: April 1982=153.6; June 1982=159.9

[10] North Central/D revised indexes: March 1982=150.3; April 1982=147.6; May 1982=152.0; June 1982=155.8

[11] North Central/D revised indexes: March 1982=137.3; April 1982=136.7; May 1982=141.4; June 1982=144.2

[12] North Central/D revised indexes: April 1982=168.9; June 1982=170.3

[13] North Central/D revised indexes: March 1982=171.7; April 1982=167.0; May 1982=170.5; June 1982=178.1

[14] North Central/D revised indexes: April 1982=173.2; June 1982=174.7

[15] North Central/D revised indexes: April 1982=169.9; June 1982=171.4

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] North Central revised indexes: April 1982=159.8; June 1982=169.8

[4] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[5] North Central revised indexes: March 1982=159.8; April 1982=158.6; May 1982=162.3; June 1982=169.7

[6] North Central revised indexes: March 1982=149.1; April 1982=149.0; May 1982=153.1; June 1982=160.5

[7] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[8] Includes direct pricing of gasohol as of September 1981.

[9] North Central revised indexes: April 1982=173.3; May 1982=177.2; June 1982=187.7

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Size Class D revised indexes: April 1982=154.1; June 1982=159.0

[4] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[5] Size Class D revised indexes: March 1982=155.2; April 1982=153.0; May 1982=158.0; June 1982=160.0

[6] Size Class D revised indexes: March 1982=140.6; April 1982=140.2; May 1982=146.3; June 1982=147.6

[7] New series: indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[8] Includes direct pricing of gasohol as of September 1981.

[9] Size Class D revised indexes: March 1982=176.1; April 1982=169.9; May 1982=173.6; June 1982=180.0

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Northeast/B revised index: June 1982=174.2

[4] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[5] Northeast/B revised indexes: May 1982=189.4; June 1982=191.4

[6] Northeast/B revised indexes: May 1982=166.1; June 1982=167.2

[7] Northeast/B revised indexes: May 1982=189.3; June 1982=194.6

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index*, by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index*, by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978; and *CPI Issues*, Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $28 domestic, and $35 foreign. Single copy $5. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.2 percent in September before seasonal adjustment. Prior to seasonal adjustment, the All Items experimental measure using a rental equivalence approach (CPI-U, X-1) advanced 0.5 percent and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.1 percent. On a 1967 = 100 basis, the CPI-U rose to a level of 293.3, the CPI-W to 292.8, and the CPI-U, X-1 to 266.8. Compared with their levels in September 1981, the CPI-U was 5.0 percent higher, the CPI-W 4.9 percent higher, and the CPI-U, X-1 5.5 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.2 percent, while the experimental CPI-U, X-1 increased 0.5 percent.

The September increase of 0.2 percent in the official CPI-U, follows an increase of 0.3 percent in August and is in line with the generally moderate rate of increase since last October. The housing component declined in September, primarily reflecting lower mortgage interest rates and house prices. Food and beverage prices posted their first rise since June. The other goods and services component rose sharply while the remaining categories of consumer spending rose about the same as in August.

For the first 9 months of 1982, the CPI-U rose at a seasonally adusted annual rate of 4.8 percent. In the 3 months ended in September, the index advanced at a 4.2 percent annual rate, compared with a 9.3 percent increase in the second quarter. The slowdown in prices from the second to the third quarter is attributable to housing and food and beverages. Over the past 12 months, however, all index groups, with the exception of medical care components, rose more moderately than in the preceding 12 month period.

The index for food and beverages rose 0.5 percent in September, following a decline of 0.3 percent in August. Grocery store food prices also advanced 0.5 percent. The index for meats, poultry, fish, and eggs, which declined 1.0 percent in August, increased 1.3 percent in September and accounted for most of the acceleration in food prices. Egg prices rose 7.1 percent, following a 13.3 percent decline in August. Pork prices continued to increase sharply—up almost 20 percent during the first 9 months of 1982. Beef prices rose slightly following 2 months of declines. The index for fruits and vegetables declined in September, but not by as much as in the preceding 2 months. Fresh fruit prices registered a substantial increase and fresh vegetable prices declined. All other grocery store foods recorded small declines or moderate increases. The index for restaurant meals rose 0.6 percent while alcoholic beverage prices were unchanged.

The housing component declined 0.2 percent in September. A 0.7 percent decline in homeownership costs was partially offset by increases in the indexes for other shelter costs and fuel and other utilities. Home financing costs declined 1.8 percent, reflecting a 1.5 percent decrease in mortgage interest rates and a 0.4 percent

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Other goods and services	1.0	.9	.7	.6	.7	.4	1.5	10.8	9.7

drop in house prices. The rent index rose 0.4 percent. Other rental costs rose sharply, largely due to higher costs for lodging while at school. The index for fuel and other utilities increased 0.9 percent as charges for natural gas rose 2.7 percent and electricity rose 0.1 percent. Fuel oil prices registered a small decline for the second consecutive month. The index for household furnishings and operations was unchanged in September, following a small decline in August.

The transportation component increased 0.3 percent in September, the same as in August. The index for gasoline registered a small decline for the second consecutive month, following an 8.4 percent increase in the 3-month period ended in July. As of September, gasoline prices were 7.8 percent below their peak level of March 1981. Automobile finance charges—down 2.0 percent in September—also declined for the second consecutive month. Price declines were also recorded for tires and motor oil, coolant, and other products. Tire prices were 1.6 percent lower in September than at the beginning of the year. These declines, however, were more than offset by increases in other transportation components, particularly, used cars and public transportation. The index for used cars—up 1.2 percent—advanced sharply for the third month in a row, following moderate increases during the first 6 months of 1982. New car prices rose 0.2 percent, following seasonal adjustment. The index for public transportation rose 1.5 percent, largely due to a 3.0 percent increase in airline fares.

The medical care index rose 0.9 percent in September, about the same as in recent months. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, also increased 0.9 percent. Charges for hospital rooms and physicians' services rose 1.1 and 0.6 percent, respectively.

The index for apparel and upkeep rose 0.2 percent in September, following a 0.4 percent increase in August. Increases in prices for the new fall and winter lines of merchandise generally followed the normal seasonal pattern.

The index for other goods and services registered a 1.5 percent increase. A 3.1 percent increase in cigarette prices and higher charges for school tuition and fees—up 8.5 percent—and school books and supplies accounted for most of the increase. The index for entertainment increased 0.4 percent in September, the same as in the preceding month.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U all items index using rent substitution (X-1) rose 0.5 percent in September. The official CPI-U rose 0.2 percent. The difference in September reflects the different treatment of homeownership costs in the two indexes. The CPI-U, X-1 uses rental charges to represent movement in shelter costs of homeowners. Rental charges increased 0.4 percent in September. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This measure of homeownership declined 0.7 percent in September.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers advanced 0.2 percent in September, following a 0.3 percent increase in August. The food and beverage index increased 0.5 percent in September, after registering no change in July and declining 0.3 percent in August. The housing component declined 0.2 percent, due to a 0.8 percent decrease in homeownership costs. The index for transportation rose 0.3 percent in September, the same as in August. The indexes for medical care (0.8 percent) apparel and upkeep (0.5 percent), and entertainment (0.3 percent) rose about the same as in August. The other goods and services component advanced sharply—up

NOTE: See Technical Notes for explanation of homeownership measures.

1.5 percent—due to increases in cigarette prices and charges for school tuition and fees and school books and supplies.

Homeownership Changes

As announced on October 27, 1981, the Bureau of Labor Statistics will change the way in which homeownership costs are measured in the CPI. Effective with release of data for January 1983, on February 25, the homeownership component of the official CPI-U will be a rental equivalence measure, similar to the present CPI-U, X-1 experimental measure, but with some refinements. Effective with data for January 1985, the CPI-W will be revised to a rental equivalence measure. Monthly publication of the CPI experimental alternative homeownership measures CPI-U, X-1 through CPI-U, X-5 will cease at the time the change to a rental equivalence measure is made in the official CPI-U.

The new homeownership component will be introduced into the CPI in such a manner that the indexes using the old and new methodologies will be equal in the so-called link month—December 1982 for the CPI-U and December 1984 for the CPI-W. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, BLS will make available to users, for a 6-month overlap period after the change in the official indexes, calculations based on the current treatment of homeownership. In the case of the CPI-U, the overlap period will run from January to June 1983; for the CPI-W, the overlap period will run from January to June 1985.

Three refinements in procedures and calculation methods now used in the current experimental measure CPI-U, X-1 will be introduced in the CPI-U beginning with data for January 1983. First, BLS is reweighting the individual rental units in the CPI sample so that they will represent owner-occupied housing units instead of renter-occupied units. The current sample of rental units was selected, using a probability-based technique, from the renter-occupied units in selected neighborhoods in each CPI pricing area. New weights will be assigned to the housing units in the sample so that they will represent the owner-occupied housing units in their neighborhoods, CPI areas, and, ultimately, all urban places in the United States.

Second, the expenditure weight for rental equivalence, which for the experimental index, X-1, was calculated by means of a short-cut method, is being recalculated using the complex statistical estimating procedure used for weights in the official CPI. In addition, the weights associated with other homeowner expenditures for such things as insurance, appliances, and maintenance and repairs are being modified to be consistent with the rental equivalence concept. This enhancement will improve the quality of the national CPI's rental equivalence weight and will provide weights for computation of local area CPI-U's using the rental equivalence approach.

Finally, the computer system which produces the CPI each month is being expanded to accomodate the calculation, with complete item and geographic detail, of a CPI-U, which employs the rental equivalence approach.

The Bureau is also augmenting the rent sample in order to enhance the rental equivalence measure. This new sampling will be concentrated in areas where the housing is predominantly owner-occupied in order to increase the proportion of rental units that have characteristics similar to owner-occupied units. In addition, BLS will continue to work on refinements in the statistical estimating techniques used in the rental equivalence measure.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $20 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

[5] Indexes on a January 1981=100 base.

[6] Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[7] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978=100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska................January 1978=100.
Baltimore, Md.........................March 1978=100.
Boston, Mass..........................January 1978=100.
Cincinnati, Ohio-Ky.-Ind.........March 1978=100.
Denver-Boulder, Colo............January 1978=100.
Miami, Fla...............................November 1977=100.
Milwaukee, Wis.......................November 1977=100.
Northeastern Pennsylvania...November 1977=100.
Portland, Oreg.-Wash............January 1978=100.
St. Louis, Mo.-Ill.....................March 1978=100.
San Diego, Calif......................November 1977=100.
Seattle-Everett, Wash............November 1977=100.
Washington, D.C.-Md.-Va......November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base. .

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978; and *CPI Issues,* Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $28 domestic, and $35 foreign. Single copy $5. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.3 percent in October before seasonal adjustment. Prior to seasonal adjustment, the All Items experimental measure using a rental equivalence approach (CPI-U, X-1) advanced 0.4 percent and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.3 percent. On a 1967=100 basis, the CPI-U rose to a level of 294.1, the CPI-W to 293.6, and the CPI-U, X-1 to 268.0. Compared with their levels in October 1981, the CPI-U was 5.1 percent higher, the CPI-W was 5.0 percent higher, and the CPI-U, X-1 was 5.6 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.5 percent, while the experimental CPI-U, X-1 increased 0.6 percent.

The October rise of 0.5 percent in the official CPI-U follows an increase of 0.2 percent in the preceding month and compares with the average monthly increase of 0.4 percent during the 12-month period ended in October. The housing component, which declined in September, advanced in October and was largely responsible for the acceleration in the overall index. The transportation, entertainment, and other goods and services components advanced more than in September. Indexes for the medical care and apparel and upkeep components rose about the same as in September, while the food and beverage component rose less.

The housing component rose 0.4 percent in October, following a decline of 0.2 percent in September. Shelter costs, which declined in September, registered a small increase in October, and the index for fuel and other utilities rose sharply. A 0.9 percent increase in residential rent offset a small decline in homeownership costs. Within homeownership, home financing costs declined 1.4 percent, as a 2.3 percent drop in mortgage interest rates more than offset an increase of 1.1 percent in house prices. The drop in mortgage interest rates reflects a decrease in conventional rates as well as a decline in FHA-VA ceiling rates. Charges for natural gas rose sharply for the second consecutive month. Fuel oil prices also increased substantially, following small declines in each of the 2 preceding months. The index for household furnishings and operations increased 0.6 percent, its first rise in 3 months.

The transportation component advanced 0.6 percent in October, following increases of 0.3 percent in each of the 2 preceding months. A rise in gasoline prices and a large increase in the automobile insurance index accounted for most of the acceleration in the transportation component. Gasoline prices advanced 0.9 percent, following seasonal adjustment, as pump prices declined less than is usual in October. Used car prices rose sharply for the fourth consecutive month. New car prices, however, declined 0.4 percent following seasonal adjustment. The 1983 model cars were included in the CPI for the first time in October and will continue to be phased into the index over the next few months. (For a report on quality change for 1983 cars, see news release USDL 82-425, dated November 16, 1982.) Automobile finance charges—down 2.3 percent—declined

Entertainment	.4	.2	.7	.8	.3	.3	1.0	6.3	5.9
Other goods and services	.8	.7	.5	.7	.4	1.5	1.9	16.4	10.9

for the third consecutive month. The index for public transportation rose 0.8 percent, largely due to increases in airline fares and intracity mass transit.

The food and beverage component advanced 0.2 percent in October. Prices for grocery store foods rose 0.1 percent, following an increase of 0.5 percent in September. The moderation in October was largely due to a 0.5 percent decline in the index for meats, poultry, fish, and eggs. A sharp decline in beef prices more than offset small increases in prices for pork and poultry. Egg prices registered their second consecutive large monthly increase, but were still substantially below their level of a year ago. The index for fruits and vegetables, which declined sharply in the third quarter, rose 0.4 percent in October, following seasonal adjustment. Prices for both cereal and bakery products and dairy products were virtually unchanged in October. The index for restaurant meals rose 0.5 percent while alcoholic beverage prices increased 0.2 percent.

The medical care index rose 0.8 percent in October, slightly less than the average monthly increase so far this year. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 1.0 percent. Charges for hospital rooms and physicians' services rose 1.0 and 0.6 percent, respectively.

The index for apparel and upkeep rose 0.2 percent in October, the same as in September. Increases in the prices for men's and boys' clothing more than offset declines in other apparel commodities—women's and girls', infants' and toddlers', and footwear. The index for apparel services rose 0.8 percent.

The index for other goods and services advanced 1.9 percent in October, the second consecutive large monthly increase. Increases in cigarette prices and school tuition and fees again accounted for most of the increase. The index for entertainment rose 1.0 percent in October, largely due to a 3.4 percent increase in the index for magazines, periodicals, and books and a 1.4 percent increase in fees for participant sports.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U using rent substitution (X-1) rose 0.6 percent in October. The official CPI-U rose 0.5 percent. The difference in October reflects the different treatment of homeownership costs in the two indexes. The CPI-U, X-1 uses rental charges to represent movement in shelter costs of homeowners. Rental charges increased 0.9 percent in October. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This measure of homeownership declined 0.1 percent in October.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers advanced 0.5 percent in October, following a 0.2 percent increase in September. The housing component, which declined in September, rose 0.5 percent in October and was largely responsible for the acceleration. Further advances in the transportation (0.5 percent), entertainment (1.0 percent), and other goods and services (1.9 percent) components also contributed to the upturn. These increases were partially offset by smaller increases in the October indexes for food and beverages—up 0.2 percent—and apparel and upkeep—up 0.1 percent. The 0.7 percent increase in the medical care index was somewhat less than the average monthly increase during the first 9 months of this year.

Homeownership Changes

As announced on October 27, 1981, the Bureau of abor Statistics will change the way in which homewnership costs are measured in the CPI. Effective vith release of data for January 1983, on February 25, he homeownership component of the official CPI-U vill be a rental equivalence measure, similar to the resent CPI-U, X-1 experimental measure, but with ome refinements. Effective with data for January 1985, he CPI-W will be revised to a rental equivalence measre. Monthly publication of the CPI experimental alernative homeownership measures CPI-U, X-1 through CPI-U, X-5 will cease at the time the change to a rental quivalence measure is made in the official CPI-U.

The new homeownership component will be introuced into the CPI in such a manner that the indexes sing the old and new methodologies will be equal in he so-called link month—December 1982 for the CPI-U and December 1984 for the CPI-W. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, BLS will make available to users, for a 6-month overlap period after the change in the official indexes, calculations based on the current treatment of homeownership. In the case of the CPI-U, the overlap period will run from January to June 1983; for the CPI-W, the overlap period will run from January to June 1985.

Three refinements in procedures and calculation methods now used in the current experimental measure CPI-U, X-1 will be introduced in the CPI-U beginning with data for January 1983. First, BLS is reweighting the individual rental units in the CPI sample so that they will represent owner-occupied housing units instead of renter-occupied units. The current sample of rental units was selected, using a probability-based tech-

able C. Official CPI-U and experimental measures using alternative approaches to homeownership costs

[1] Residential rent, not seasonally adjusted.

NOTE: See Technical Notes for explanation of homeownership measures.

nique, from the renter-occupied units in selected neighborhoods in each CPI pricing area. New weights will be assigned to the housing units in the sample so that they will represent the owner-occupied housing units in their neighborhoods, CPI areas, and, ultimately, all urban places in the United States.

Second, the expenditure weight for rental equivalence, which for the experimental index, X-1, was calculated by means of a short-cut method, is being recalculated using the complex statistical estimating procedure used for weights in the official CPI. In addition, the weights associated with other homeowner expenditures for such things as insurance, appliances, and maintenance and repairs are being modified to be consistent with the rental equivalence concept. This enhancement will improve the quality of the national CPI's rental equivalence weight and will provide weights for computation of local area CPI-U's using the rental equivalence approach.

Finally, the computer system which produces the CPI each month is being expanded to accommodate the calculation, with complete item and geographic detail, of a CPI-U, which employs the rental equivalence approach.

The Bureau is also augmenting the rent sample in order to enhance the rental equivalence measure. This new sampling will be concentrated in areas where the housing is predominantly owner-occupied in order to increase the proportion of rental units that have characteristics similar to owner-occupied units. In addition, BLS will continue to work on refinements in the statistical estimating techniques used in the rental equivalence measure.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $28 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Revised indexes: Nov. 1981 = 285.3; Dec. 1981 = 285.9; Jan. 1982 = 289.6; Feb. 1982 = 289.2; Mar. 1982 = 290.2 Apr. 1982 = 290.3

[4] Revised index. Additional revised indexes: Feb. 1982 = 263.0; Apr. 1982 = 264.2; June 1982 = 268.9

[5] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] See Table 30 for revised indexes.

[3] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y. .... November 1963=100.
Dallas-Fort Worth, Tex. .... November 1963=100.
Honolulu, Hawaii .... December 1963=100.

[4] Indexes on a January 1981=100 base.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[6] Indexes are on the bases listed:

Atlanta, Ga. .... December 1977=100.
Buffalo, N. Y. .... February 1978=100.
Cleveland, Ohio .... February 1978=100.
Dallas-Fort Worth, Tex. .... February 1978=100.
Honolulu, Hawaii .... December 1977=100.
Houston, Tex. .... April 1978=100.
Kansas City, Mo.-Kans. .... December 1977=100.
Minneapolis-St. Paul, Minn.-Wis. .... April 1978=100.
Pittsburgh, Pa. .... April 1978=100.
San Francisco-Oakland, Calif. .... December 1977=100.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[8] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Revised indexes: Nov. 1981=281.6; Dec. 1981=282.1; Jan. 1982=285.6; Feb. 1982=285.4; Mar. 1982=286.4; Apr. 1982=286.6

[4] Revised index. Additional revised indexes: Feb. 1982=262.0; Apr. 1982=263.3; June 1982=269.0

[5] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] See Table 32 for revised indexes.

[3] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y. .... November 1963=100.
Dallas-Fort Worth, Tex. .... November 1963=100.
Honolulu, Hawaii .... December 1963=100.

[4] Indexes on a January 1981=100 base.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where 1967=100.

[6] Indexes are on the bases listed:

Atlanta, Ga. .... December 1977=100.
Buffalo, N. Y. .... February 1978=100.
Cleveland, Ohio .... February 1978=100.
Dallas-Fort Worth, Tex. .... February 1978=100.
Honolulu, Hawaii .... December 1977=100.
Houston, Tex. .... April 1978=100.
Kansas City, Mo.-Kans. .... December 1977=100.
Minneapolis-St. Paul, Minn.-Wis. .... April 1978=100.
Pittsburgh, Pa. .... April 1978=100.
San Francisco-Oakland, Calif. .... December 1977=100.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[8] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981 = 100 base.

[3] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[4] New series; includes direct pricing of new trucks and motorcycles as of September 1982.

[5] New series; indexes on a June 1978 = 100 base; includes direct pricing of diesel and gasohol as of September 1981.

[6] Includes direct pricing of gasohol as of September 1981.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series; includes direct pricing of new trucks and motorcycles as of September 1982.

[5] New series; indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[6] Includes direct pricing of gasohol as of September 1981.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

NA Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981 = 100 base.

[3] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[4] New series; includes direct pricing of new trucks and motorcycles as of September 1982.

[5] New series; indexes on a June 1978 = 100 base; includes direct pricing of diesel and gasohol as of September 1981.

[6] Includes direct pricing of gasohol as of September 1981.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981 = 100 base.

[3] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[4] New series; includes direct pricing of new trucks and motorcycles as of September 1982.

[5] New series; indexes on a June 1978 = 100 base; includes direct pricing of diesel and gasohol as of September 1981.

[6] Includes direct pricing of gasohol as of September 1981.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1	-	More than 4,000,000.
A-2	-	1,250,000 to 4,000,000.
B	-	385,000 to 1,250,000.
C	-	75,000 to 385,000.
D		Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978; and *CPI Issues,* Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $28 domestic, and $35 foreign. Single copy $5. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) declined 0.2 percent in November before seasonal adjustment. Prior to seasonal adjustment, the All Items experimental measure using a rental equivalence approach (CPI-U, X-1) advanced 0.1 percent, and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) declined 0.1 percent. On a 1967=100 basis, the CPI-U declined to a level of 293.6, and the CPI-W to 293.2, while the CPI-U, X-1 rose to 268.4. Compared with their levels in November 1981, both the CPI-U and the CPI-W were 4.6 percent higher, and the CPI-U, X-1 was 5.3 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.1 percent, while the experimental CPI-U, X-1 advanced 0.4 percent.

The 0.1 percent increase in the official CPI-U follows an increase of 0.5 percent in October. While all major categories of consumer spending—other than medical care—contributed to the slowdown, a decline in housing costs accounted for over two-thirds of the deceleration in the November CPI. Apparel prices also declined while the index for entertainment was unchanged. Small increases were recorded for the food and beverage and transportation components. On the other hand, the indexes for medical care and other goods and services rose substantially.

The housing component declined 0.2 percent in November. A 0.8 percent decline in homeownership costs was partially offset by increases in the indexes for fuel and utilities and rent. Within homeownership, home financing costs decreased 2.3 percent, reflecting a large decline in mortgage interest rates and a small increase in house prices. Over the past 3 months, the index for mortgage interest rates has dropped 6.1 percent. The rent index rose 0.6 percent, following a 0.9 percent increase in October. The index for fuel and other utilities registered a 1.3 percent increase. Fuel oil prices rose sharply for the second consecutive month. Charges for both natural gas and electricity also rose sharply. During the first 11 months of 1982, natural gas prices have increased almost 25 percent. The index for household furnishings and operations declined 0.2 percent, following an increase of 0.6 percent in October.

The food and beverage component advanced 0.1 percent in November. Prices for grocery store food declined slightly, largely due to a decrease in the index for meats, poultry, fish, and eggs. Pork prices declined 1.3 percent after rising sharply through most of 1982. Poultry and egg prices also registered declines. Beef prices, on the other hand, rose moderately. Most other major grocery store food groups recorded small declines or very moderate increases. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.4 and 0.3 percent, respectively.

The transportation component advanced 0.3 percent in November, following a 0.6 percent increase in October. The slowdown was largely due to declines in the indexes for new cars and public transportation and a

smaller increase in gasoline prices than in October. New car prices declined 0.5 percent, following seasonal adjustment. The 1983 models continued to be phased into the index with relatively small price increases. In addition, financing discounts on 1982 models caused a larger than normal proportion of the previous year's models to be included in the index. Automobile finance charges—down 3.4 percent—declined for the fourth consecutive month. Gasoline prices advanced 0.3 percent. Since March 1981, gasoline prices have declined by 6.8 percent. The decline in the index for public transportation was due to a decrease in airline fares. The 2.0 percent increase in used car prices for November was the largest since the fourth quarter of 1981. The index for automobile insurance also rose substantially, but by less than in October.

The 1.0 percent advance in the medical care component in November follows a 0.8 percent rise in October and compares with an average monthly increase 0.9 percent during the last 12 months. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 0.6 percent. Charges for hospital rooms and professional services rose 1.5 and 0.6 percent, respectively. Since November 1981, charges for hospital rooms have increased 13.8 percent and professional services have increased 6.9 percent.

The index for apparel and upkeep declined 0.2 percent in November, following increases of 0.2 percent in each of the preceding 2 months. All major groups of apparel commodities registered declines. The index for apparel services rose 0.5 percent.

The index for other goods and services registered its third consecutive large monthly increase—rising 1.1 percent in November—as increases in cigarette prices accounted for most of the advance. The index for entertainment was unchanged in November, following a 1.0 percent increase in October, as price declines for sporting goods, toys, hobbies, and other entertainment goods offset increases in entertainment services.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U rent substitution (X-1) rose 0.4 percent in November. The official CPI-U rose 0.1 percent. The difference in November reflects the different treatment of homeownership costs in the two indexes. The CPI-U, X-1 uses rental charges to represent movement in shelter costs of homeowners. Rental charges increased 0.6 percent in November. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This latter measure of homeownership declined 0.8 percent in November.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers increased 0.1 percent in November, following a 0.5 percent advance in October. The housing component, which rose 0.5 percent in October, declined 0.2 percent in November and was largely responsible for the deceleration. All other major categories of consumer spending—other than medical care—also contributed to the slowdown. The indexes for apparel and upkeep and entertainment declined slightly (-0.1 percent), while small increases were recorded for the food and beverage (0.1 percent) and transportation (0.3 percent) components. The index for other goods and services rose substantially—up 1.3 percent—but by less than in October. The medical care component advanced 1.0 percent.

Homeownership Changes

As announced on October 27, 1981, the Bureau of Labor Statistics will change the way in which homeownership costs are measured in the CPI. Effective with release of data for January 1983, on February 25, the homeownership component of the official CPI-U will be a rental equivalence measure, similar to the present CPI-U, X-1 experimental measure, but with some refinements. Effective with data for January 1985, the CPI-W will be revised to a rental equivalence measure. Monthly publication of the CPI experimental alternative homeownership measures CPI-U, X-1 through CPI-U, X-5 will cease at the time the change to a rental equivalence measure is made in the official CPI-U.

The new homeownership component will be introduced into the CPI in such a manner that the indexes using the old and new methodologies will be equal in the so-called link month—December 1982 for the CPI-U and December 1984 for the CPI-W. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, BLS will make available to users, for a 6-month overlap period after the change in the official indexes, calculations based on the current treatment of homeownership. In the case of the CPI-U, the overlap period will run from January to June 1983; for the CPI-W, the overlap period will run from January to June 1985.

Three refinements in procedures and calculation methods now used in the current experimental measure CPI-U, X-1 will be introduced in the CPI-U beginning with data for January 1983. First, BLS is reweighting the individual rental units in the CPI sample so that they will represent owner-occupied units in selected neighborhoods in each CPI pricing area. New weights will be assigned to the housing units in the sample so

[1] Residential rent, not seasonally adjusted.

NOTE: See Technical Notes for explanation of homeownership measures.

that they will represent the owner-occupied housing units in their neighborhoods, CPI areas, and, ultimately, all urban places in the United States.

Second, the expenditure weight for rental equivalence, which for the experimental index, X-1, was calculated by means of a short-cut method, is being recalculated using the complex statistical estimating procedure used for weights in the official CPI. In addition, the weights associated with other homeowner expenditures for such things as insurance, appliances, and maintenance and repairs are being modified to be consistent with the rental equivalence concept. This enhancement will improve the quality of the national CPI's rental equivalence weight and will provide weights for computation of local area CPI-U's using the rental equivalence approach.

Finally, the computer system which produces the CPI each month is being expanded to accommodate the calculation, with complete item and geographic detail, of a CPI-U, which employs the rental equivalence approach.

The Bureau is also augmenting the rent sample in order to enhance the rental equivalence measure. This new sampling will be concentrated in areas where the housing is predominantly owner-occupied in order to increase the proportion of rental units that have characteristics similar to owner-occupied units. In addition, BLS will continue to work on refinements in the statistical estimating techniques used in the rental equivalence measure.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $28 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

[5] Indexes on a January 1981=100 base.

[6] Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[7] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978=100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska	January 1978=100.
Baltimore, Md.	March 1978=100.
Boston, Mass.	January 1978=100.
Cincinnati, Ohio-Ky.-Ind.	March 1978=100.
Denver-Boulder, Colo.	January 1978=100.
Miami, Fla.	November 1977=100.
Milwaukee, Wis.	November 1977=100.
Northeastern Pennsylvania	November 1977=100.
Portland, Oreg.-Wash.	January 1978=100.
St. Louis, Mo.-Ill.	March 1978=100.
San Diego, Calif.	November 1977=100.
Seattle-Everett, Wash.	November 1977=100.
Washington, D.C.-Md.-Va.	November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Miami, Fla	November 1977=100.
Milwaukee, Wis	November 1977=100.
Northeastern Pennsylvania	November 1977=100.
Portland, Oreg.-Wash	January 1978=100.
St. Louis, Mo.-Ill	March 1978=100.
San Diego, Calif	November 1977=100.
Seattle-Everett, Wash	November 1977=100.
Washington, D.C.-Md.-Va	November 1977=100.

[9] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 8.

[10] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[11] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the verage change in prices over time in a fixed market asket of goods and services. Effective with the January 978 index, the Bureau of Labor Statistics began ublishing CPI's for two population groups: (1) a new PI for All Urban Consumers (CPI-U) which covers aproximately 80 percent of the total noninstitutional ivilian population; and (2) a revised CPI for Urban Vage Earners and Clerical Workers (CPI-W) which epresents about half the population covered by the PI-U. The CPI-U includes, in addition to wage earners nd clerical workers, groups which historically have een excluded from CPI coverage, such as professional, anagerial, and technical workers, the self-employed, hort-term workers, the unemployed, and retirees and thers not in the labor force.

The CPI is based on prices of food, clothing, shelter, nd fuels, transportation fares, charges for doctors' and entists' services, drugs, and the other goods and serves that people buy for day-to-day living. Prices are colected in 85 urban areas across the country from about 8,000 tenants, 18,000 housing units for property taxes, nd about 24,000 establishments—grocery and departent stores, hospitals, filling stations, and other types f stores and service establishments. All taxes directly ssociated with the purchase and use of items are includd in the index. Prices of food, fuels, and a few other ems are obtained every month in all 85 locations. rices of most other commodities and services are colected every month in the five largest geographic areas nd every other month in other areas. Prices of most oods and services are obtained by personal visits of the ureau's trained representatives. Mail questionnaires re used to obtain public utility rates, some fuel prices, nd certain other items.

In calculating the index, price changes for the various ems in each location are averaged together with eights which represent their importance in the spendg of the appropriate population group. Local data are en combined to obtain a U.S. city average. Separate dexes are also published by size of city, by region of e country, for cross-classifications of regions and opulation-size classes, and for 28 local areas. Area inexes do not measure differences in the level of prices mong cities; they only measure the average change in rices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978; and *CPI Issues,* Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $28 domestic, and $35 foreign. Single copy $5. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $125 in contiguous U.S. and Hawaii; $135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) declined 0.4 percent in December before seasonal adjustment. Prior to seasonal adjustment, the All Items experimental measure using a rental equivalence approach (CPI-U, X-1) advanced 0.1 percent, and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) declined 0.4 percent. On a 1967 = 100 basis, the CPI-U declined to a level of 292.4, and the CPI-W to 292.0, while the CPI-U, X-1 rose to 268.6. Compared with their levels in December 1981, both the CPI-U and the CPI-W were 3.9 percent higher, and the CPI-U, X-1 was 5.0 percent higher.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers declined 0.3 percent, while the experimental CPI-U, X-1 advanced 0.3 percent.

The decline of 0.3 percent in the official CPI-U in December follows an increase of 0.1 percent in November and, with March 1982, was only the second decline in the seasonally adjusted index since August 1965. The decrease in the housing index, due to a sharp drop in mortgage interest rates, was primarily responsible for the decrease in the overall CPI. The food and beverage and apparel and upkeep components also registered declines, while the indexes for transportation and entertainment were virtually unchanged in December. Significant increases, however, were recorded for the other goods and services and medical care components.

For the 12 months ended in December 1982, the CPI-U rose 3.9 percent; this compares with a rise of 8.9 percent in 1981. The increase in 1982 was the smallest December-to- December rise since the 3.4 percent in 1972. While the slowdown in 1982 was broadly based, it was most apparent in those components which had been largely responsible for the substantial increases in the last several years. In particular, the decline in mortgage interest costs and the moderation in energy prices accounted for about three-fourths of the overall slowdown recorded for 1982.

The housing component declined 0.8 percent in December. A 1.7 percent decline in homeownership costs was partially offset by moderate increases in the indexes for fuel and utilities, household furnishings and operations, and rent. Within homeownership, home financing costs decreased 4.6 percent, reflecting a sharp decline in mortgage interest rates and a small increase in house prices. Over the past 4 months, interest rates have dropped 10.6 percent. The rent index rose 0.3 percent, less than in recent months. The index for fuel and other utilities also moderated, registering a 0.7 percent increase. Fuel oil prices declined, following large increases in each of the 2 preceding months. The index for electricity recorded a much smaller increase than in November. Charges for natural gas, however, con-

tinued to increase sharply—up over 25 percent during the past 12 months.

The index for food and beverages registered a decline of 0.1 percent in December. Grocery store food prices—down 0.5 percent—declined for the second consecutive month, largely as a result of a decrease in the index for meats, poultry, fish, and eggs. Beef, pork, poultry, and egg prices all registered sharp declines. The index for fruits and vegetables also declined as lower prices for fresh fruits and processed fruits and vegetables were partially offset by a sharp increase in fresh vegetable prices. Other major grocery store food groups recorded only small changes in December. The two remaining components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.6 and 0.1 percent, respectively.

The transportation component was unchanged in December, following an increase of 0.3 percent in November. Increases in car prices—both new and used—were offset by decreases in gasoline prices and charges for public transportation and automobile financing. Used car prices rose 1.5 percent in December and have increased 8.5 percent over the past 6 months. New car prices, which had declined in October and November, rose 0.4 percent. On the other hand, the index for gasoline registered a decline of 0.9 percent. As of December, gasoline prices were 7.6 percent below their peak level of March 1981. Automobile finance charges—down 2.9 percent—declined for the fifth consecutive month. The index for public transportation declined 0.1 percent, the same as in November, as a decrease in airline fares offset increases in intercity bus and train fares.

The 0.7 percent advance in the medical care component in December was the smallest increase since February. The index for medical care commodities, which includes prescription and nonprescription drugs and medical supplies, increased 0.3 percent. The index for medical care services rose 0.8 percent.

The index for apparel and upkeep declined 0.4 percent in December, following a 0.2 percent decrease in November. Apparel commodity prices declined 0.5 percent as almost all clothing items recorded declines. The index for apparel services rose 0.3 percent, the smallest increase in 10 months.

The index for other goods and services registered its fourth consecutive large monthly increase—rising 1.2 percent in December—as increases in cigarette prices again accounted for most of the advance. The index for entertainment rose 0.1 percent in December, following no change in November.

CPI-U Experimental Measure

On a seasonally adjusted basis, the CPI-U rent substitution (X-1) rose 0.3 percent in December. The official CPI-U declined 0.3 percent. The difference in December reflects the different treatment of homeownership costs in the two indexes. The CPI-U, X-1 uses rental charges to represent movement in shelter costs of homeowners. Rental charges increased 0.3 percent in December. The official CPI-U employs house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs. This latter measure of homeownership declined 1.7 percent in December.

For the 12 months ended in December 1982, the CPI-U, X-1 rose 5.0 percent; this compares with a rise of 8.5 percent in 1981. The official CPI-U rose 3.9 percent in 1982 and 8.9 percent in 1981. During 1982 the homeownership component for the CPI-U, X-1 rose more than the homeownership in the official CPI-U—6.6 percent versus only 1.4 percent. In contrast the official measure rose faster during 1981—10.1 percent compared with 8.5 percent for the experimental measure.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)–seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers declined 0.3 percent in December, following an increase of 0.1 percent in November. A decline of 0.8 percent in the housing component was largely responsible for the decrease. Declines in the food and beverage (down 0.1 percent) and apparel and upkeep (down 0.3 percent) components also contributed to the decrease in the overall CPI. On the other hand, small increases were recorded for transportation (0.1 percent) and entertainment (0.3 percent). The medical care component advanced 0.6 percent. The index for other goods and services rose substantially—up 1.4 percent.

Homeownership Changes

As announced on October 27, 1981, the Bureau of Labor Statistics will change the way in which homeownership costs are measured in the CPI. Effective with release of data for January 1983, on February 25, the homeownership component of the official CPI-U will be a rental equivalence measure, similar to the present CPI-U, X-1 experimental measure, but with some refinements. Effective with data for January 1985, the CPI-W will be revised to a rental equivalence measure. Monthly publication of the CPI experimental alternative homeownership measures CPI-U, X-1 through CPI-U, X-5 will cease at the time the change to a rental equivalence measure is made in the official CPI-U.

The new homeownership component will be introduced into the CPI in such a manner that the indexes using the old and new methodologies will be equal in the so-called link month—December 1982 for the CPI-U and December 1984 for the CPI-W. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, BLS will make available to users, for a 6-month overlap period after the change in the official indexes, calculations based on the current treatment of homeownership. In the case of the CPI-U, the overlap period will run from January to June 1983; for the CPI-W, the overlap period will run from January to June 1985.

Three refinements in procedures and calculation methods now used in the current experimental measure CPI-U, X-1 will be introduced in the CPI-U beginning with data for January 1983. First, BLS is reweighting

[1] Residential rent, not seasonally adjusted.

NOTE: See Technical Notes for explanation of homeownership measures.

the individual rental units in the CPI sample so that they will represent owner-occupied housing units instead of renter-occupied units. The current sample of rental units was selected, using a probability-based technique, from the renter-occupied units in selected neighborhoods in each CPI pricing area. New weights will be assigned to the housing units in the sample so that they will represent the owner-occupied housing units in their neighborhoods, CPI areas, and, ultimately, all urban places in the United States.

Second, the expenditure weight for rental equivalence, which for the experimental index, X-1, was calculated by means of a short-cut method, is being recalculated using the complex statistical estimating procedure used for weights in the official CPI. In addition, the weights associated with other homeowner expenditures for such things as insurance, appliances, and maintenance and repairs are being modified to be consistent with the rental equivalence concept. This enhancement will improve the quality of the national CPI's rental equivalence weight and will provide weights for computation of local area CPI-U's using the rental equivalence approach.

Finally, the computer system which produces the CPI each month is being expanded to accommodate the calculation, with complete item and geographic detail, of a CPI-U, which employs the rental equivalence approach.

The Bureau is also augmenting the rent sample in order to enhance the rental equivalence measure. This new sampling will be concentrated in areas where the housing is predominantly owner-occupied in order to increase the proportion of rental units that have characteristics similar to owner-occupied units. In addition, BLS will continue to work on refinements in the statistical estimating techniques used in the rental equivalence measure.

Homeownership Costs

The Bureau of Labor Statistics has announced a plan to change the way the Consumer Price Index measures homeownership costs. Here are some questions and answers about the change.

1. Why is the change in the homeownership component being made?

The change is being made to improve the CPI. The cost of owning a home is a large part of a family's expenses. People buy houses to live in and because houses are important investments. The CPI should include the price of the shelter provided by the home but should exclude the change in the value of the house as an asset. The new approach will do that.

2. Will the change result in lower inflation figures?

There is no way of knowing whether the new measure will produce higher or lower inflation figures. In the past an experimental measure similar to the one to be adopted rose more slowly than the CPI.

3. Was politics involved in the decision to change the CPI?

The decision to change the homeownership component was made entirely on technical grounds by the Commissioner of Labor Statistics. The CPI is widely used to adjust benefits under government programs and payments under private contracts. Any change in the index naturally is of concern to those who have a stake in these payments, both as payers and recipients. Because of these concerns, decisions about CPI measurement are carefully insulated from politics.

4. How does the present CPI measure homeownership?

The present CPI reflects the cost of the purchase of a house as an asset. The index includes the net price of the house purchased, the total amount of mortgage interest contracted for over half the life of the mortgage, property taxes, insurance, and home maintenance and repairs. The current CPI represents the expenditures of only those who purchased houses in the base period, roughly 6 percent of all consumers covered by the index. All other consumers living in their own homes are assumed to have no home purchase and mortgage interest cost at all.

5. What is wrong with the current approach?

From a practical point of view, accurate data needed to support the current approach are becoming increasingly difficult to obtain. The scarcity of long-term mortgage financing, the growth of seller financing, and the advent of variable rate mortgages have combined to make the current approach unrepresentative of the marketplace.

Furthermore, the current approach is based upon the purchase of an asset rather than the price of the shelter consumed. The index reflects shelter costs incurred only by those who purchased homes in the base period and does not cover shelter costs incurred by others who lived in homes purchased in earlier years.

6. How will the new homeownership measure differ?

A new measure of rental equivalence will be used to represent the cost of the shelter consumed by the homeowner. BLS agents will collect information on rents for housing units that are similar to those that are owned. The change in these rents will represent the change in the amount that a homeowner would have to pay each month to live in a home like the one he owns.

7. How will the change to rental equivalence affect the weight of homeownership in the CPI?

Homeownership costs make up about 25 percent of the present CPI. In an experimental rental equivalence measure produced by BLS, homeownership accounted for about 14 percent.

8. How will the rental equivalence measure differ from the CPI rent measure?

The rental equivalence measure will consist of rents for a sample of homes for which sample weights represent owned units. Thus, in each sampling area, the

housing units will represent the proportion of owner-occupied houses rather than the proportion of rental units.

9. How do other countries measure homeownership?

Most other countries use a rental equivalence approach; some measure user cost more directly; and some exclude homeownership completely from the index. The United States is the only country in the world which includes the asset value of a house in the CPI.

10. Why did BLS wait so long to make the change?

The CPI is an important statistical series which affects the incomes of a large number of people. It must have public credibility and it must be understood. The BLS raised the measurement issue publicly more than 10 years ago, published papers on the subject, calculated alternative measures, and encouraged public discussion of the issues involved. It took time for people to understand the issue.

11. Why is there so much advance notice of the change?

A major change in an important index like the CPI cannot be made without advance notice. Approximately 1 year of notice is being provided for the change in the CPI for All Urban Consumers (CPI-U), which has only existed since 1978. The CPI for Urban Wage Earners and Clerical Workers (CPI-W), however, has been used for indexation since World War I. It is used in a large number of major collective bargaining agreements, many of which last for 3 years. For this reason, longer notice is being given for the CPI-W. Thus, the CPI-U will be changed beginning with data for January 1983 and the CPI-W beginning with data for January 1985.

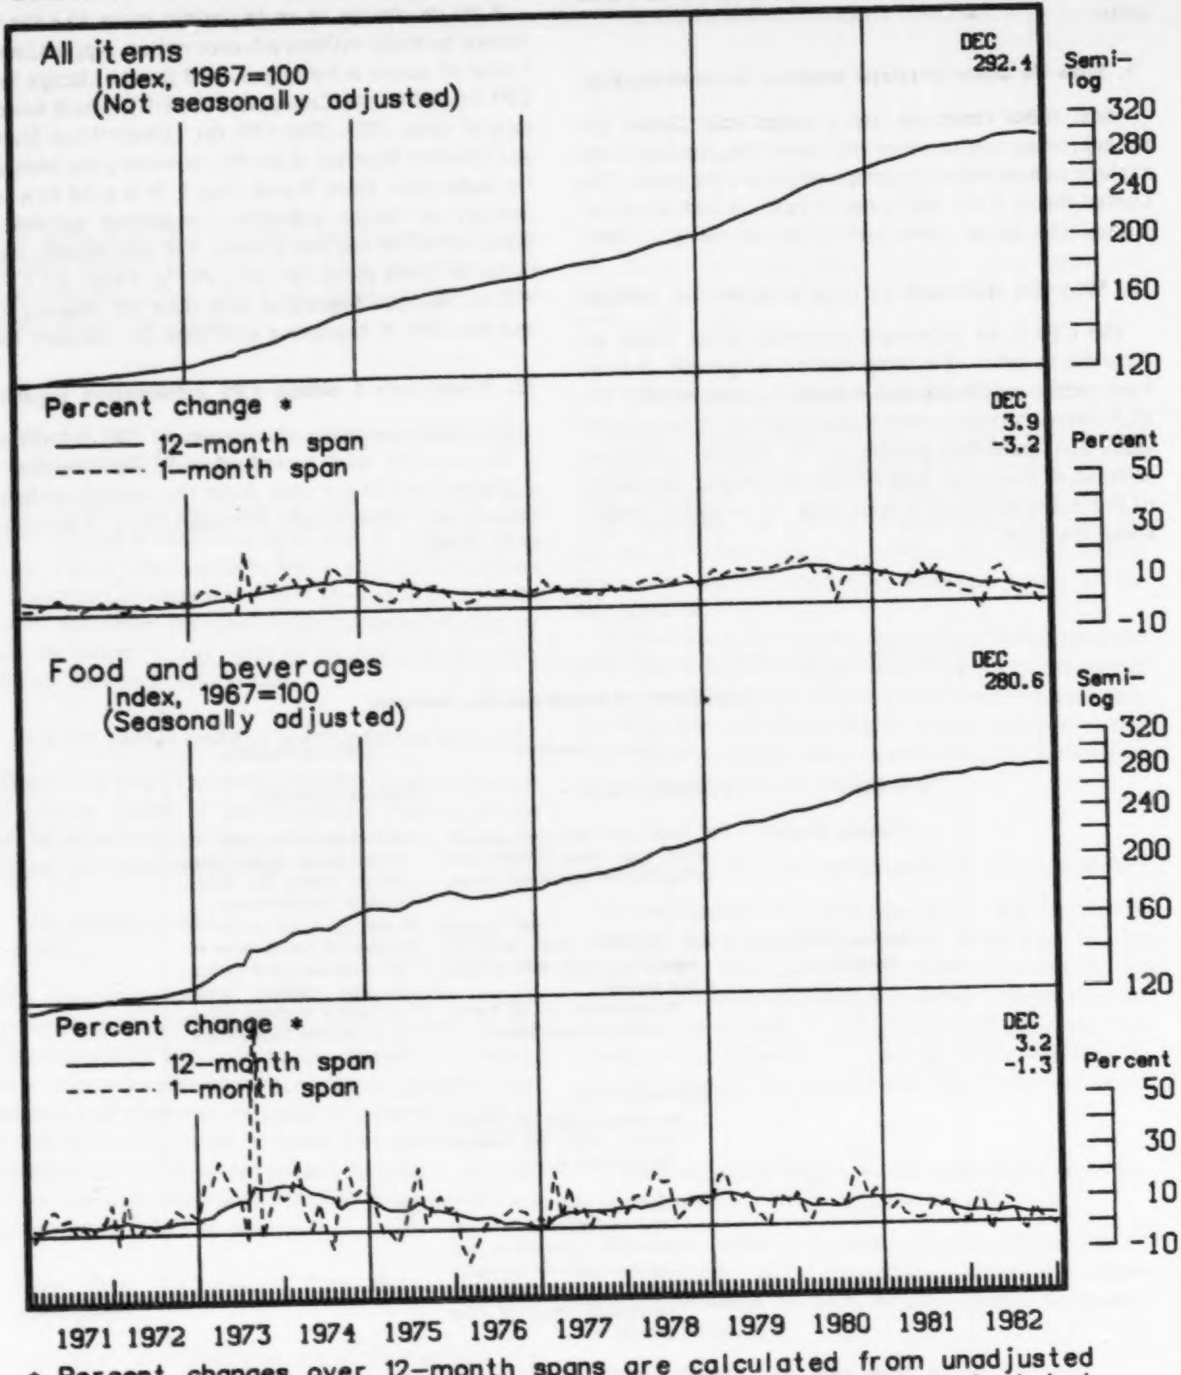
12. Where can I obtain CPI information regularly?

The most comprehensive source of CPI information is the monthly BLS periodical, *CPI Detailed Report*, available for $28 per year from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Comparison of homeownership measures

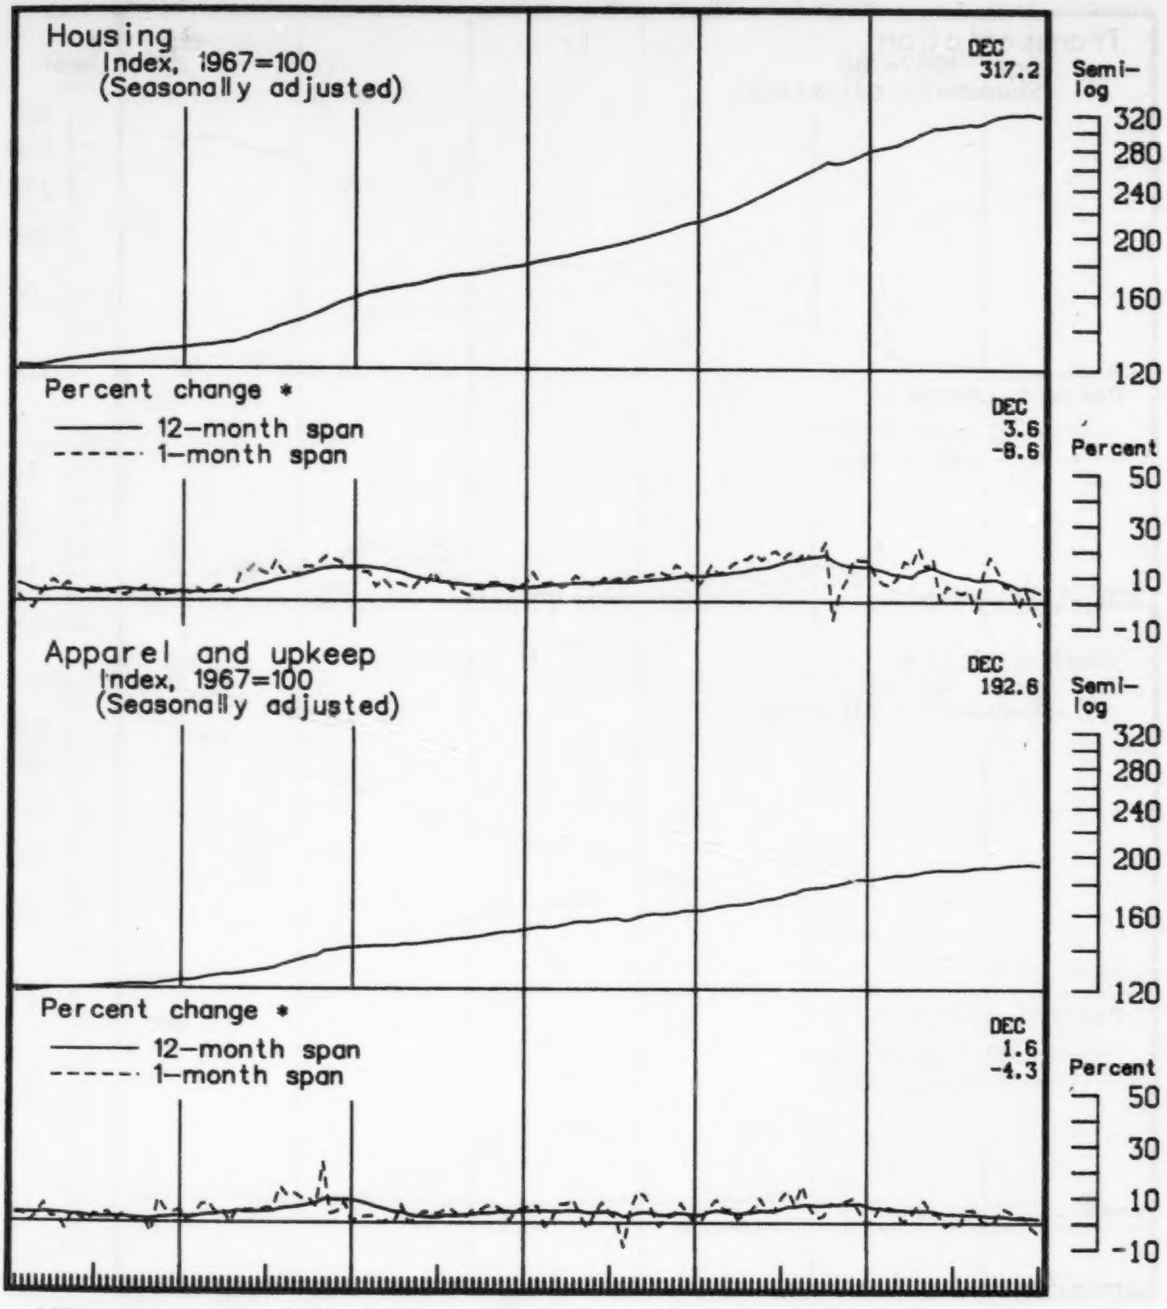
	Current treatment	*Rental equivalence*
1. Concept:	Purchase of asset	Purchase of shelter
2. Families covered:	For house price and mortgage interest, only those families who in base period purchased house	All families who lived in owned homes during base period; covers the entire stock of owned homes
3. Method of weight derivation:	a. For property taxes, property insurance, home maintenance and repairs: Expenditures of all homeowners in base period	Estimate of rental value of all owner-occupied houses in base period; based on specific question asked in Consumer Expenditure Survey
	b. For house price: Net expenditures (purchases minus sales) for houses during base period	
	c. For mortgage interest: Total amount of interest expected to be paid over half the stated life of the mortgage only for those who purchased house in base period	
4. Prices used:	Current monthly prices for each element, including current price of house and current mortgage interest rate (conventional, Federal Housing Administration, and Veterans Administration)	Current rent paid for homes like those that are owned

Chart 1. CPI-U: All items, food and beverages, 1971-82



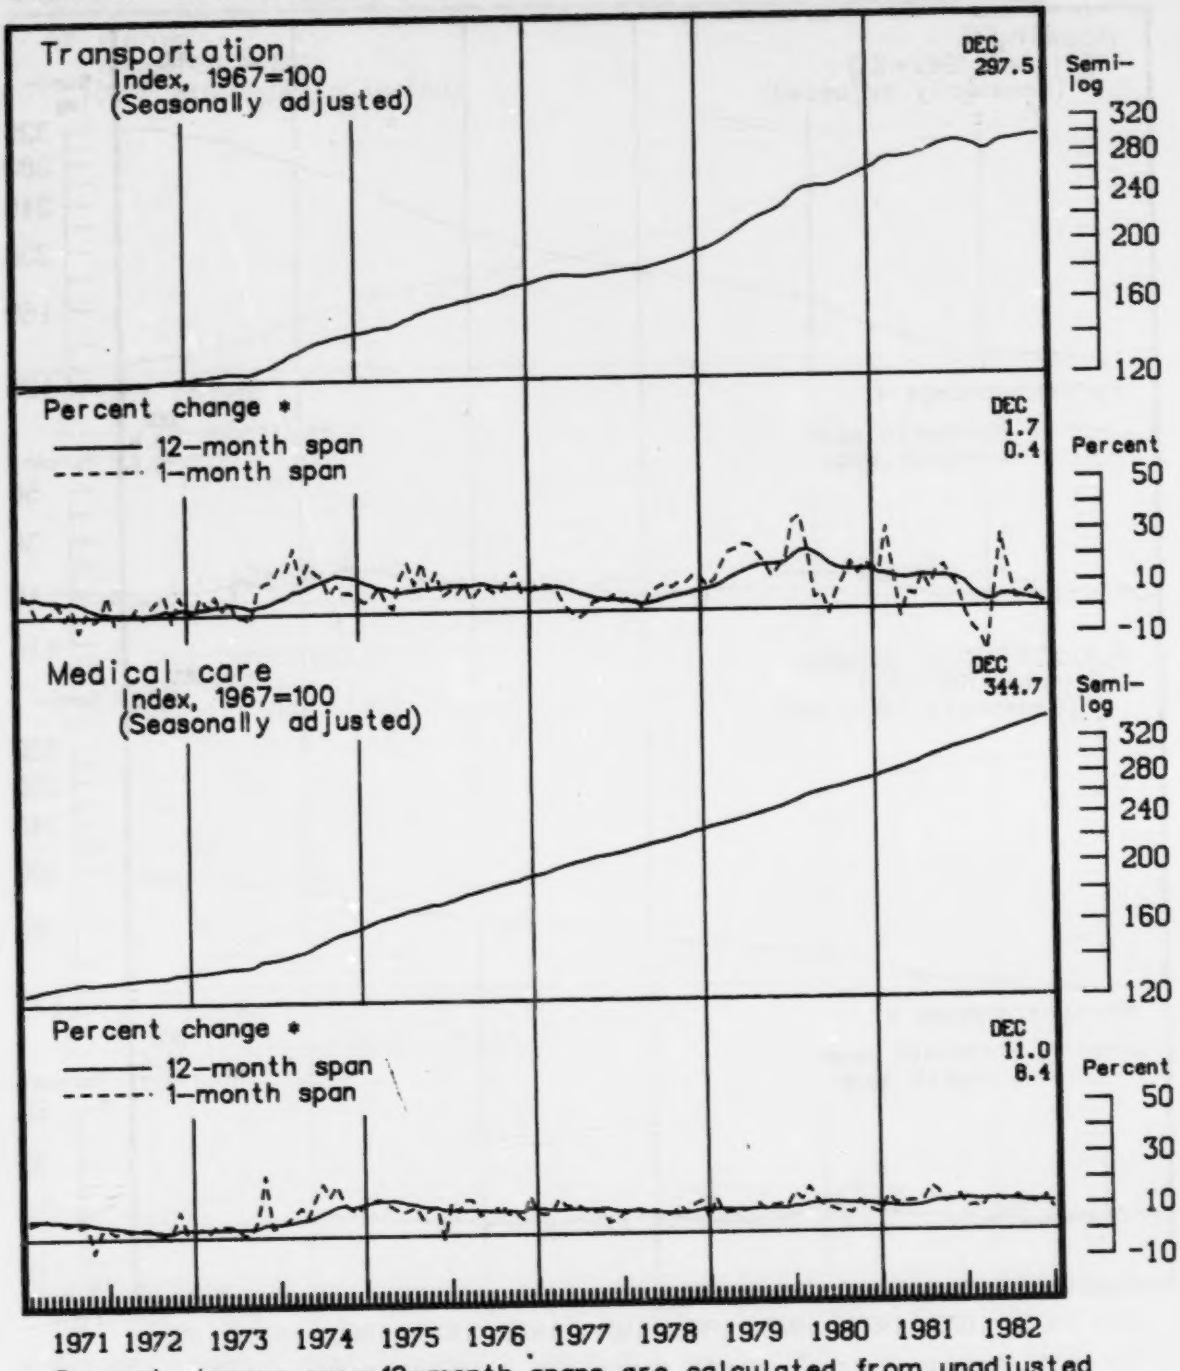
* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Chart 2. CPI-U: Housing, apparel and upkeep, 1971-82



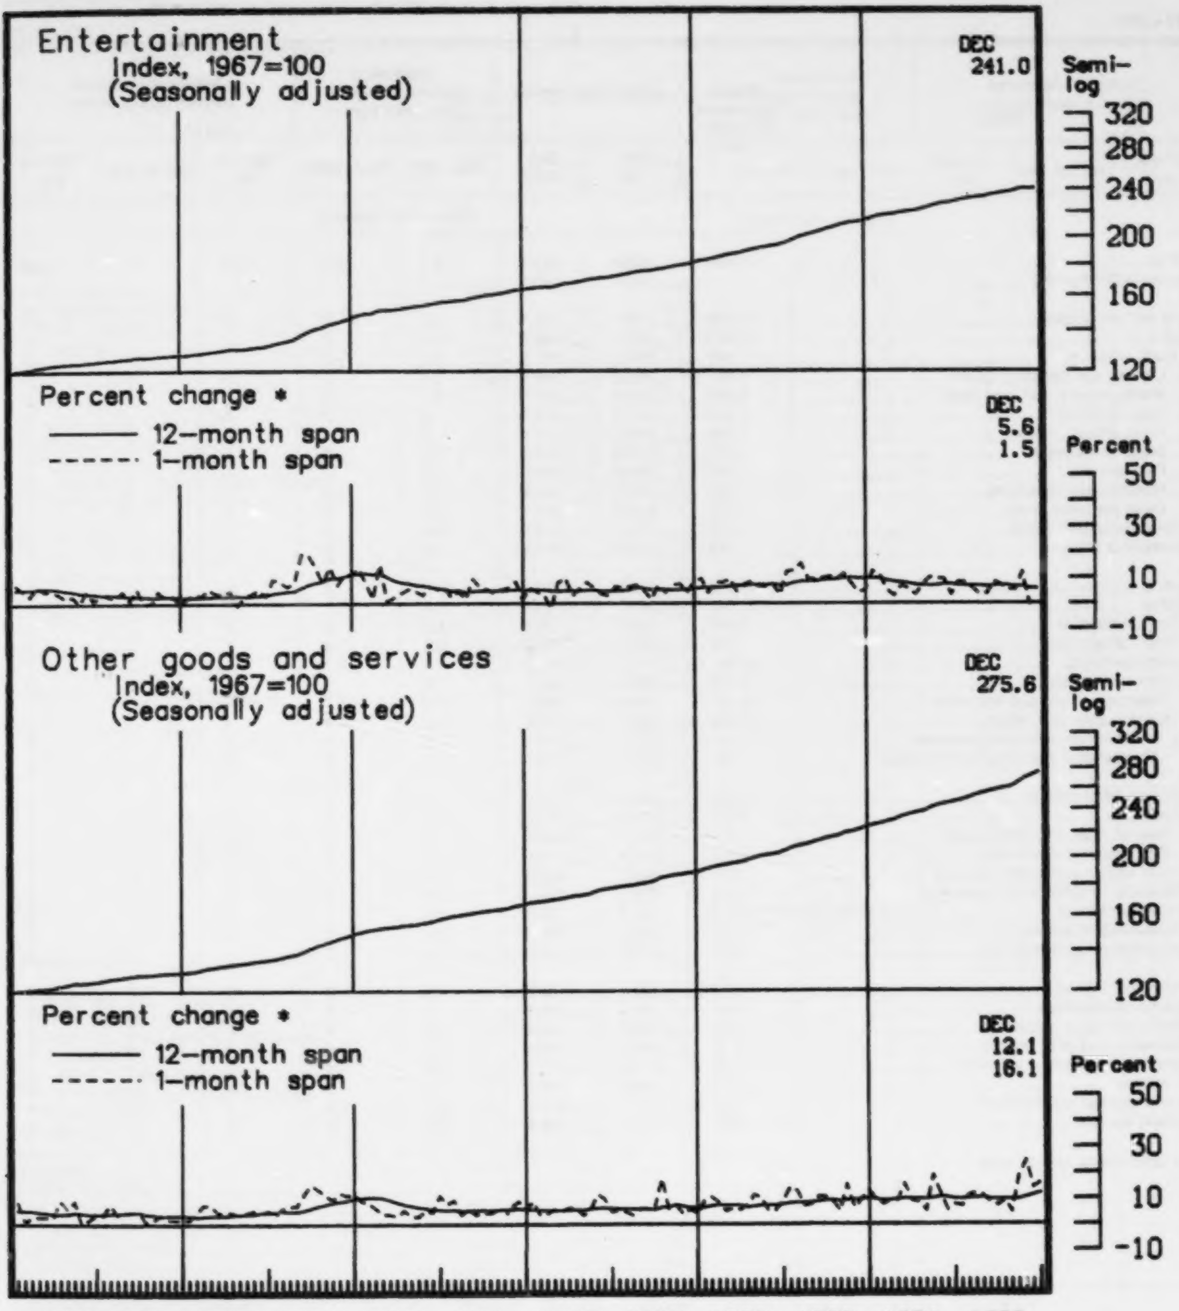
* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Chart 3. CPI-U: Transportation and medical care, 1971-82



* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Chart 4. CPI-U: Entertainment, other goods and services, 1971-82



* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1	-	More than 4,000,000.
A-2	-	1,250,000 to 4,000,000.
B	-	385,000 to 1,250,000.
C	-	75,000 to 385,000.
D	-	Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; ndexes are on the bases listed:

Buffalo, N. Y.	November 1963=100.
Dallas-Fort Worth, Tex.	November 1963=100.
Honolulu, Hawaii	December 1963=100.

[3] Indexes on a January 1981=100 base.

[4] Indexes on a June 1978=100 base; formerly on the bases listed in ootnote 5, except in Buffalo, N.Y. where 1967=100.

[5] Indexes are on the bases listed:

Atlanta, Ga.	December 1977=100.
Buffalo, N. Y.	February 1978=100.
Cleveland, Ohio	February 1978=100.
Dallas-Fort Worth, Tex.	February 1978=100.
Honolulu, Hawaii	December 1977=100.
Houston, Tex.	April 1978=100.
Kansas City, Mo.-Kans.	December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978=100.
Pittsburgh, Pa.	April 1978=100.
San Francisco-Oakland, Calif.	December 1977=100.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

South/D	2	12/77	-	159.8	-	159.2	5.4	-.4	-	-	-	-
West/D	2	12/77	-	158.5	-	158.0	5.9	-.3	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

South/D	.1	1.0	.1	-.5	.6	-.1
West/D	-.5	-.1	-1.7	1.6	1.1	-1.0

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series; includes direct pricing of new trucks and motorcycles as of September 1982.

[5] New series; indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[6] Includes direct pricing of gasohol as of September 1981.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981 = 100 base.

[3] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[4] New series; includes direct pricing of new trucks and motorcycles as of September 1982.

[5] New series; indexes on a June 1978 = 100 base; includes direct pricing of diesel and gasohol as of September 1981.

[6] Includes direct pricing of gasohol as of September 1981.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

** Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981 = 100 base.

[3] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[4] New series; includes direct pricing of new trucks and motorcycles as of September 1982.

[5] New series; indexes on a June 1978 = 100 base; includes direct pricing of diesel and gasohol as of September 1981.

[6] Includes direct pricing of gasohol as of September 1981.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - [2] 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[4] New series; includes direct pricing of new trucks and motorcycles as of September 1982.

[5] New series; indexes on a June 1978=100 base; includes direct pricing of diesel and gasohol as of September 1981.

[6] Includes direct pricing of gasohol as of September 1981.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a January 1981=100 base.

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

NA Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978; and *CPI Issues,* Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluted based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.

Explanation of Homeownership Measures

Official CPI-U includes five components. The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home and the total amount of interest expected to be paid over half the stated life of the mortgage. Current monthly prices are used for each of these components.

Experimental Measure X-1: The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3 uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base-period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. The prices used for each of these items are current ones.

Experimental Measure X-5: The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, and maintenance and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. Current prices are used in X-5 except for mortgage interest which uses the 15-year weighted moving average also used in the X-3.

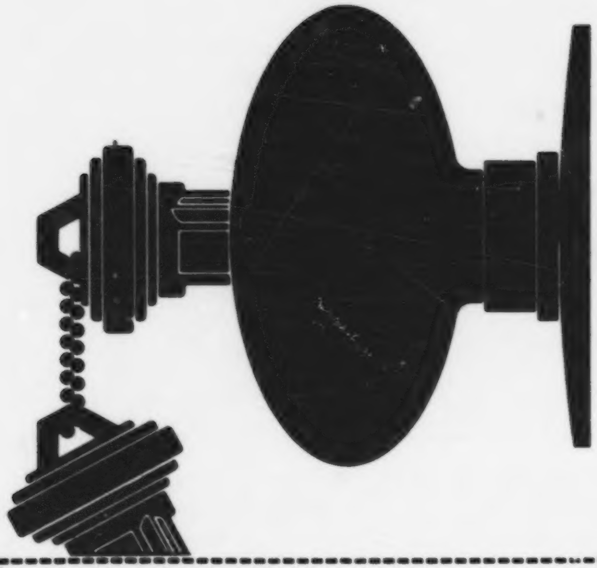
Rent or Buy? Evaluating Alternatives in the Shelter Market

U.S. Department of Labor
Bureau of Labor Statistics



"Rent or Buy? Evaluating Alternatives in the Shelter Market" helps a person or family compare the financial aspects of owning and renting shelter suited to their needs. A step-by-step procedure for making the comparison is outlined and fully illustrated. Space is provided to help determine:

- The monthly outlay to own a house of your choosing before and after tax saving from homeownership.
- The proceeds if you were to sell the house after a given period of time.
- The amount you can spend for rent and be as well-off financially after a given period of time as if you bought.

The pamphlet, first issued in 1974, has been updated to depict more recent economic conditions that affect shelter decisions.

Available only from the
Superintendent of Documents
U.S. Government Printing Office
Washington, D.C. 20402

Please send _____ copies of "Rent or Buy? Evaluating Alternatives in the Shelter Market," Bulletin 2016, Stock No. 029-001-02309-0, at $3.50 each.

☐ Enclosed is a check or money order payable to Superintendent of Documents.
